

Medicaid Enrollment: June 2009 Data Snapshot

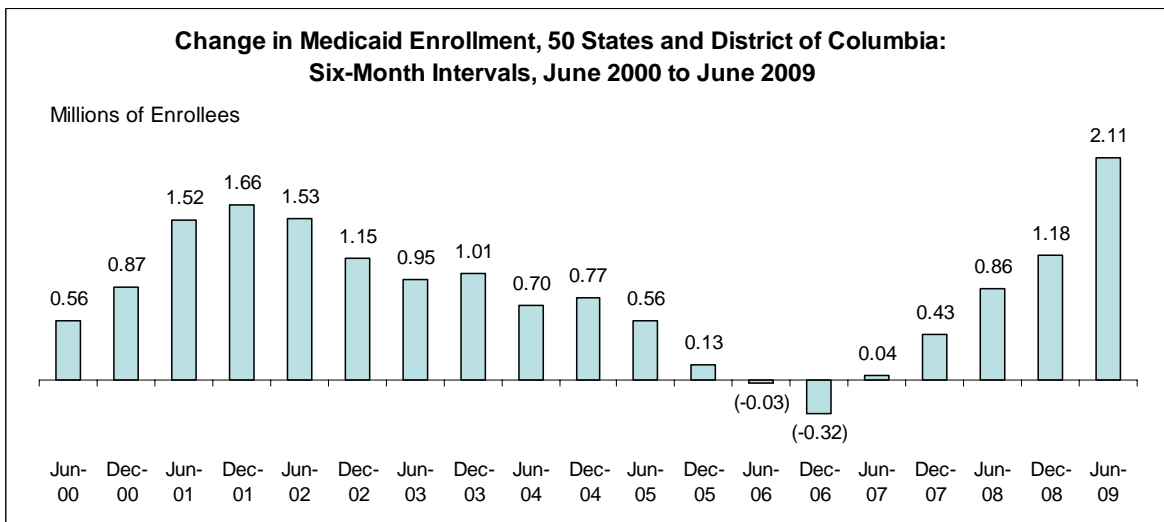

As economic conditions deteriorated and unemployment rose from 5.5% in June 2008 to 9.5% in June 2009, national Medicaid enrollment grew at a level not seen since the early days of program implementation in the late 1960s. In June 2009, monthly Medicaid enrollment rose by 3.29 million, a 7.5% increase over June 2008 (Figure 1). The program expanded to cover 46.87 million Americans in June 2009, many of whom turned to Medicaid as their only source of health coverage as they lost jobs and income during the economic recession. Millions more who did not meet their state's Medicaid eligibility criteria likely joined the ranks of the nation's uninsured.

Figure 1

Monthly Medicaid enrollment growth has been accelerating in each six-month period since the recession began in December 2007. The largest six-month increase since the program's early years occurred from December 2008 to June 2009 as monthly Medicaid enrollment rose by 2.11 million (Figure 2). If Medicaid enrollment follows the pattern of prior recessions, the second half of 2009 would be expected to produce even stronger enrollment growth.

Figure 2

SOURCE: Compiled by Health Management Associates from state Medicaid enrollment reports for KCMU.

Cross State Trends. Consistent with the rise in national Medicaid enrollment, the number of Medicaid enrollees increased in every state from June 2008 to June 2009 (Table 1). This represents the first time since the early 1990s that enrollment has grown in every state. Although the size of the annual increase in Medicaid enrollment varied considerably across states, 13 states

Children vs. Adults. Since children are significantly more likely to be eligible for public coverage than adults, most of the growth (60%) in Medicaid enrollment between June 2008 and June 2009 occurred among children (2.0 million of the 3.3 million total growth, see Table 3).

* Connecticut excludes QMB-only enrollees. After December 2000, Maine's QMBs are excluded. SLMBs and QIs were included for the first time in June 2003 data for Georgia and June 2008 for South Carolina.

SOURCE: Compiled by Health Management Associates from state Medicaid enrollment reports for KCMU.

Conclusion. Given historical trends in Medicaid enrollment, it is likely that enrollment will continue to rise over the next year. The impact of the economic recession on children and families through job loss and the corresponding loss of health insurance is still being realized. This rise in enrollment is occurring at the same time that states are facing fiscal constraints and the potential expiration of enhanced federal aid on December 31, 2010, making it difficult for them to meet this growing demand for health coverage.

These June 2009 enrollment data provide the latest available snapshot of Medicaid trends nationally and across the states. For more detailed information on methodology and state-by-state enrollment reporting, see *Medicaid Enrollment in 50 States: December 2008 Data Update*, available online at <http://www.kff.org/medicaid/7606.cfm>.

This publication (#8050) is available on the Kaiser Family Foundation's website at www.kff.org.

The Kaiser Commission on Medicaid and the Uninsured provides information and analysis on health care coverage and access for the low-income population, with a special focus on Medicaid's role and coverage of the uninsured. Begun in 1991 and based in the Kaiser Family Foundation's Washington, DC office, the Commission is the largest operating program of the Foundation. The Commission's work is conducted by Foundation staff under the guidance of a bipartisan group of national leaders and experts in health care and public policy.
