# EXECUTIVE SUMMARY

**VIRTUALLY ALL PUBLIC SCHOOL STUDENTS  
WILL TAKE SEX EDUCATION IN  
7TH–12TH GRADE.**

# EXECUTIVE SUMMARY

Today, virtually all public schools provide some form of sex education. Sex education is in fact so prominent in the lives of young people that it is now a primary source of information on sexual health issues: according to a national survey conducted by the Kaiser Family Foundation, 44 percent of 13 to 18 year-olds name sex education as one of their most important resources. (See Figure 1.) In spite of how common sex education has become—and the level of debate it has inspired—there has been relatively little information available about what actually happens in the classroom.

**FIGURE 1. FINDING OUT ABOUT THE FACTS OF LIFE**  
Percent of teens, ages 13–18, who say they get information about how to talk about sexual health issues from...

Source: Kaiser Family Foundation/YM Magazine, National Survey of Teens: Teens Talk about Dating, Intimacy, and Their Sexual Experiences, Spring 1998

This report, prepared by the Kaiser Family Foundation, provides a snapshot of sex education in America today from the inside looking out. Through a series of national surveys conducted in 1999, it provides an in-depth look at what is actually happening in the classroom from the perspectives of those with the most direct experience: students, parents, teachers, and principals.

Overall, the importance of sex education is reinforced again and again: students who have sex education—regardless of the curriculum—know more and feel better prepared to handle different situations and decisions than those who have not. Still, not all students' information needs are being met by their sex education, which generally does a good job on the basics but less frequently covers more skill-based information such as where to get and how to use contraception or how to talk with a boy or girlfriend about safer sex. Parents, when asked specifically what they want sex education to look like, say courses need to cover more and last longer than most actually do today.

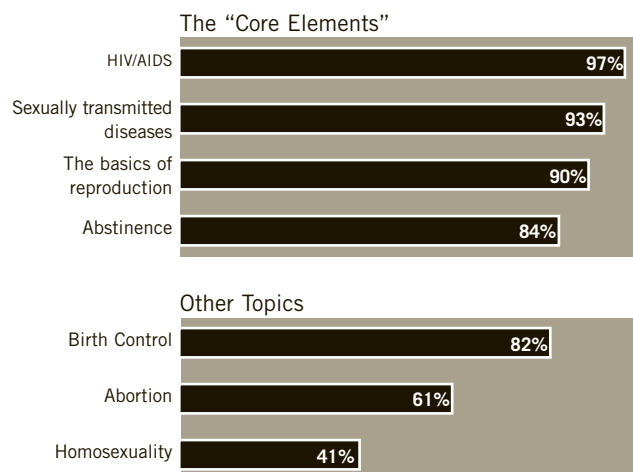

## WHAT IS HAPPENING IN CLASSROOMS?

The large majority of public school students—89 percent—take sex education sometime between 7th and 12th grades though often only once or twice and usually over just a few class periods. While once boys and girls took sex education in separate classes, today's classes are typically co-ed and taught within another course such as health.

When it comes to the topics that are covered, abstinence, that is teaching young people to wait to have sex, figures prominently in most sex education. Also included among a core set of fundamentals are some mention of HIV/AIDS and other sexually transmitted diseases and the basics of reproduction. (See Figure 2) More skill-based instruction,

As part of a broader curriculum, abstinence is a standard message in most sex education today.

**FIGURE 2. SEX ED 101**  
Percent of 7th–12th Grade Students Who Say Their Most Recent Sex Ed Class Covered...

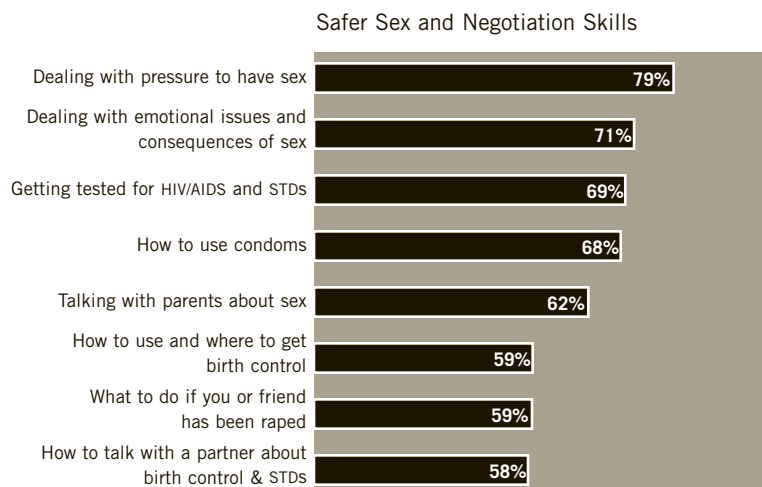

such as how to deal with the pressures and emotional consequences of sexual activity, how to talk with parents or partners about sexual health issues, where to get tested for STDs, and how to obtain birth control, is covered less frequently and less consistently. (See Figure 3.)

The main message emphasized in most public secondary school sex education is described by both students and educators as a more comprehensive one that includes abstinence and provides at least some information about birth control; approximately one in three schools teach abstinence as the only option. (See Figure 4.)

Despite the apparent differences between the two approaches, the study finds that in reality the boundaries are often hazy in terms of what is actually covered in abstinence-only and more comprehensive sex education classes. At least some students and teachers in courses that they describe as having a main message of abstinence-only report that information was still included about how to use and where to get birth control or how to get tested for HIV/AIDS. Likewise, many sex education courses described as comprehensive appear to provide only surface-level information about birth control and HIV/AIDS and other STDs while not addressing more practical aspects of how to use birth control or talk with a partner about sexual health issues, or where to go to get tested for HIV or other STDs.

**FIGURE 3. SEX ED 101—CONTINUED**  
Percent of 7th–12th Grade Students Who Say Their Most Recent Sex Ed Class Covered...

Overall there is little difference in the sense of preparedness of students who take courses with an abstinence-only versus a comprehensive approach to sex education. A large majority of students—regardless of the main message of their sex education—say they feel at least somewhat prepared to handle a range of sexual decisions and situations. Although students and parents said sex education—regardless of approach—could do a better job at teaching communication and negotiation skills.

**FIGURE 4. THE “MAIN MESSAGE”**  
Percent of public secondary school principals reporting that the “main message” of sex education is...

**WHAT DO PARENTS WANT?**

Some of the most surprising findings of the report involve what parents say they want schools to teach their children. In general, parents want a wider range of topics taught than is often included in sex education today. Not only do parents strongly support covering the “core elements” already taught in most sex education—HIV/AIDS and other STDs, the basics of reproduction, and abstinence—they often want sex education to cover topics that are not uniformly taught, such as safer sex and negotiation skills.

While nearly all parents report wanting sex education to teach students about safer sex and negotiation skills, far fewer students say these topics were covered in their most recent sex education course. In some cases the gap is as wide as 25 to 35 percentage points between the percent

of parents who say they want such topics included and the percent of students who report that they are covered. The topics for which this difference is greatest include what to do in cases of rape or sexual assault, talking to parents about sex, homosexuality, talking with partners about birth control and STDs, obtaining and using birth control, dealing with the emotional consequences of sex, and getting tested for HIV/AIDS and other STDs. This suggests that many parents would like their children’s sex education courses to venture further beyond the basics than they currently do. (See Figure 5.)

Parents generally want a wider range of topics covered than often is included in sex education today.

Parents also say sex education should not shy away from more sensitive topics, and specify that issues such as these should be “discussed in a way that provides a fair and balanced presentation of the facts and different views in society.” Most (74%) say they trust that their children’s sex education is teaching attitudes and values that they support.

**FIGURE 5. WHAT PARENTS WANT**

**...AND, WHAT DO STUDENTS NEED?**

Most students say they need more information about sexual health issues than they are getting in school. In spite of their confidence in their abilities to handle a variety of situations and their general knowledge, even those students who have had sex education say they need more information about a number of sexual health issues, including those that are covered in their sex education courses. (See Figure 6.)

Students say they need more information about sexual health issues than they are getting in school.

Students are most likely to say they need more information about negotiation and communication skills. In particular, students want to know more about how to deal with the emotional issues and consequences of being sexually active and how to talk to a partner about birth control and STDs. Students also want more information about what to do in cases of rape and sexual assault and about HIV/AIDS and other STDs.

**HOW GOOD A JOB IS SEX EDUCATION DOING?**

Overall, students give mostly As and Bs in terms of how well their sex education is preparing them to understand the basics of reproduction, waiting to have sex, and dealing with pressure to have sex. Students rate the teaching of communication skills—such as how to talk with their parents or a boyfriend or girlfriend—somewhat lower. Instruction in how to use and where to get birth control—due in part to the fact that many courses do not teach this—also gets lower grades from students.

Students and educators give today's sex education generally high marks.

**FIGURE 6. INFORMATION NEEDS**

Percent of students who have had sex ed who say they need more information about...

Students who have had sex education feel more prepared than those who have not.

Students who have not had sex education in secondary school overall are more prepared to handle a range of decisions and situations—and are more knowledgeable on sexual health issues—as compared with those who have not had sex education. (See Figure 7.) Specifically, students who have had some form of sex education during their secondary school years report feeling more equipped to deal with the pressures surrounding sex—including deciding to wait—as well as to communicate about sexual health issues and to know where to get and how to use birth control if they needed it.

**FIGURE 7. PREPAREDNESS INDEX**  
Overall sense of preparedness of students to handle sexual decisions and situations by whether or not they have had sex education

When it comes to basic knowledge about pregnancy and HIV and other STD prevention, students who have had sex education also know more. Students were asked a series of questions about reproduction, birth control, HIV/AIDS, and other sexual health issues. Students who have not had sex education scored lower as compared to those who have had sex education. (See Figure 8.)

**FIGURE 8. KNOWLEDGE INDEX**  
Overall knowledge of pregnancy and HIV/STD prevention of students by whether or not they have had sex education

### WHO INFLUENCES WHAT GETS TAUGHT?

Input on sex education comes from many different places. The large majority of principals report that the school district and/or local government has influence on sex education curriculum; close to three in four public secondary schools also get direction from state government. The large majority say their school is required to follow local or state guidelines for sex education (See Figure 9.) Most principals say teachers and parents are also at least somewhat involved in determining what is taught at their school. (See Figure 10.) When a specific topic is not taught in sex education, principals often cite a school or district policy.

# METHODOLOGY

**INTERVIEWS WITH 313 PRINCIPALS,  
1,001 TEACHERS OF SEX EDUCATION,  
AND 1,501 PAIRS OF STUDENTS  
AND PARENTS NATIONWIDE.**

# METHODOLOGY

The Henry J. Kaiser Family Foundation's 1999 Benchmark Survey on Sex Education in America surveyed principals, teachers, students and parents involved in sex education instruction at public middle, junior, and senior high schools across the country. Interviews with 313 principals, 1,001 teachers of sex education, and 1,501 pairs of students and parents were conducted by telephone from February through May, 1999. This document is a summary of the methods used in each component survey; further details are available in the relevant technical reports.

## SAMPLE DESIGN AND SURVEY PROCEDURES

The samples for each survey were independent. The principal and teacher samples were designed to represent all public middle, junior, and senior high schools enrolling grades 7 through 12 in the continental United States. Schools were randomly and proportionally selected from a national database of public schools by type of school (middle, junior, and senior high). Schools that provided no sex education curriculum were ineligible, and those which declined to say whether they offered such instruction were also considered ineligible.

In the principal survey, one full year of service as principal at the school sampled was required for eligibility.

In the teacher survey, one teacher was recruited from each school contacted from among:

*"...any teacher in your school who teaches sex education to 7th through 12th graders ... this includes teachers of any classes or talks that discuss relationships, how babies are made, abstinence, pregnancy prevention, and the like. These topics may be taught as a separate sex-ed course, as part of another course like health or science, or as independent lessons."*

Teachers must have taught sex education materials in some format within the preceding two years to be eligible for the survey.

The student-parent survey was conducted using list-assisted random digit dialing (RDD) to achieve a nationally representative sample of (continental) U.S. households with telephones, regardless of whether a phone number is listed, purposely unlisted, or too new to be listed. In each contacted household, interviewers spoke with an adult informant to determine the number of children living in the household between the ages of 11 and 19, their grade levels, and whether they were currently attending public school. Households with at least one public school 7th to 12th grader continued with the full interview. Demographic information was collected for households where only the age criteria was met in order to facilitate weighting, as described below.

Once an eligible student in grade 7 through 12 had been identified (randomly selected if more than one lived in the household), interviewers asked to speak to the father or male guardian of that child first. If the father or male guardian was not available at the time, the interviewer asked to speak to the mother or female guardian. (This procedure was designed to balance the number of men and women participating.) The parent/guardian was interviewed first and then the student was interviewed, if possible during the same contact but by a later call if necessary.

All schools in the principal sample were mailed an advance letter one week prior to interviewing. This letter identified Princeton Survey Research Associates and explained the purpose and nature of the study. The letter described the sponsor of the study as "non-profit, non-partisan health care philanthropy working in health policy and public education." Potential respondents in all three surveys received a similar introduction at telephone contact, and were promised that their participation and responses would be kept confidential.

Interviews for all surveys were conducted from February 2 through May 23, 1999. At least 15 attempts were made to complete an interview at every sampled school or household. The calls were staggered over times of day and days of the week (9 am until 8 pm EST, Monday through Friday for school-based surveys) to maximize the chances of making a contact with a potential respondent. Refusals were re-contacted at least once in order to attempt to convert them to completed interviews.

**Sample Characteristics and Outcomes: Surveys of Principals, Teachers, and Students-Parents**

	<b>Student-Parent</b>	<b>Teachers</b>	<b>Principals</b>
Completed interviews	1,501	1,001	313
95% Margin of Error	±3%	±3%	±6%
Design Effect	1.23	1.06	1.12
Response rate	54%	72%	41%
Total sample attempted	35,331	1,920	1,012
Units in sample that were contacted	73%	76%	56%
Cooperation among contacted units	83%	95%	74%

**WEIGHTING AND STATISTICAL PRECISION**

Weighting is used in all three surveys to adjust for minor differences between the set of complete interviews and the populations they represent due to survey nonresponse. Weighted statistics yield unbiased estimates of the nationwide attributes and experiences of schools (as experienced by principals and teachers) and 7th–12th grade public school students and their parents. (All surveys excluded Alaska and Hawaii).

The data for the school-based surveys were weighted to approximate the distribution of all middle, junior, and senior public schools by geographic region and type of residential area (urban, suburban, non-metropolitan) according to the National Center for Education Statistics (NCES) Common Core of Data for the 1997–1998 school year.

Weighting for the household-based student-parent survey was slightly more complicated. The most accurate and timely data on U.S. households are from the March 1998 Current Population Survey (CPS). These data may be analyzed only with respect to children of given ages, but not by grade level or attendance at public school. We therefore retained records from the screening interviews for all households with children 11 through 19, and matched them to corresponding CPS data. Complete interviews were weighted to approximate CPS distributions of gender, age, education, and race and Hispanic origin for the parents, plus the geographic region of the household.

The overall margins of error for the three surveys are: ±6% for principals and ±3% for teachers, students and parents. The margin of error indicates, for example, that the estimated sample percentage for a given variable in the principals survey will be no more than six percentage points away from its true value in 95 out of 100 samples drawn in the same way. This summary measure reflects a confidence interval around a true value of 50%, and precision may be greater at other values. The margin of error estimates also reflect a composite DESIGN EFFECT for each survey that accounts for the loss of precision that generally accompanies weighting. (See the technical documentation for each survey for more information about precision and statistical testing.)

**RESPONSE RATES**

A survey's response rate estimates the proportion of eligible respondents in the sample that were successfully interviewed. The response rate for the three surveys are: 41% for principals, 72% for teachers, 54% for students and parents. PSRA's sample disposition codes and rate formulas comply with standards set by the American Association for Public Opinion Research.

# SECTION ONE

SEX ED 101:  
WHAT HAPPENS IN  
THE CLASSROOM?

**THE MOST COMMONLY COVERED TOPICS IN SEX EDUCATION TODAY ARE: HIV/AIDS AND OTHER STDS, THE BASICS OF REPRODUCTION, AND ABSTINENCE.**

## SEX ED 101: WHAT HAPPENS IN THE CLASSROOM?

Once upon a time, sex education was taught in separate classes for boys and girls. Boys learned primarily about venereal disease from filmstrips that provided all the insight and information a soldier might receive in boot camp prior to his first leave. Girls learned primarily about the biology of the female reproductive system. When the filmstrips and lectures were over, students were still pretty much in the dark.

Today, sex education classes are largely coed and focus on biological, emotional, and practical issues that provide students with a broad range of knowledge crucial to their personal development and future sexual health. Most public schools teach some form of sex education, and virtually all students will have had sex education by the time they graduate. Fewer than 10 percent of students receive no sex education whatsoever.

For most students, sex education is taught over a few class periods as part of health education. Typically, a student will take sex education only once or twice during secondary school (7th through 12th grades). Many of these classes include opportunities for students to discuss what they learn as well as their concerns. High school sex education tends to cover a wider set of topics. Courses taught in the 7th and 8th grades more often stick to the “birds and bees” basics.

The core elements covered in public secondary school sex education include HIV/AIDS and other STDs, the basics of reproduction, and abstinence—these topics form the foundation of almost every sex education course. But while the basics receive a fair amount of attention in sex education courses, important negotiation and coping skills do not receive the same amount of classroom time. More practical skills such as where to get and how to use birth control, how to talk to a partner about an STD, or where to get tested are less frequently covered.

Most sex education taught in public secondary schools today is described by both students and educators as taking a more “comprehensive” approach—that is, teaching abstinence as well as providing some information about birth control and safer sex. Yet, one in three schools nationwide say the main message in their sex education is “abstinence-only,” defined as teaching abstinence, often until marriage, as the only option for young people. Despite the significant differences in the curriculum of these two approaches, in practice the study finds that there is often a blurring of boundaries. In the classroom, for example, at least some classes in which the main message is described as abstinence-only do offer practical information about birth control or safer sex. On the other hand, many comprehensive sex education classes do not actually provide information about how to use or where to get birth control.

The section that follows examines what sex education today looks like from the perspectives of the students taking the classes and the teachers teaching them, including main messages, how the typical class is structured, and what topics are taught.

**WHEN AND HOW OFTEN SEX EDUCATION IS TAUGHT**

Although the content and duration of sex education courses vary across the nation's schools, in 1999 an overwhelming majority of 7th through 12th graders (90%) in public schools took some form of sex education; only 10 percent had not taken any. The most common reason given by students for not taking sex education is either that their school does not offer it or that they expect to be taking it later. Less than one percent of students say they have not taken sex education because a parent or guardian did not give permission to take the course. Most of those who have not had sex education are in the younger grades (7th or 8th ) and, based on the responses of older students, likely will have sex education before they graduate if they stay in a public school system.

While half of students (51%) report having had some form of sex education in elementary school, the large majority of students are taught sex education in 7th through 12th grades. Fully nine in ten (89%) will have taken a sex education course in secondary school by the time they are in the 11th or 12th grade; most (76%) will have one or two courses during that time. (See Tables 1 and 2.)

**TABLE 1 STUDENTS: OVERVIEW OF SEX EDUCATION SINCE FIRST GRADE**  
Students in 7th–12th grade.

	Current Grade			
	Total	7–8	9–10	11–12

3	7	0	10	12
4	1	0	1	2
5 or more	*	0	0	1
n	1501	525	507	469

**THE STRUCTURE OF THE TYPICAL SEX EDUCATION CLASS**

Most public secondary school sex education teachers (74%) say the most recent class they taught lasted only one or several class periods. One in five students (21%) get more exposure to sex education in classes lasting a half semester or more. A few courses (8%) last for an entire semester or more. (See Table 3.)

**TABLE 3 TEACHERS: DURATION OF SEX EDUCATION CLASSES?**  
Teachers of 7th–12th grade sex ed.

	Total	Most Recent Course		
		7–8	9–10	11–12
<b>One or several class periods</b>	<b>74%</b>	77%	70%	75%
Half a semester or quarter	13	13	16	9
Entire semester or quarter	6	4	7	8
A school year	2	1	2	2
n	1000	423	410	167

Most teachers (81%) also report that boys and girls are taught in the same classroom. Those who do teach gender-segregated classes are more likely to do so in younger grades: a quarter (24%) of 7th–8th grade teachers taught sex education to boys and girls separately, as compared with 17 percent of those teaching 9th–10th graders, and just one in 10 (11%) who teach 11th–12th graders. (See Table 4.)

**TABLE 4 TEACHERS: COED OR SINGLE-SEX CLASSES?**

Teachers of 7th–12th grade sex ed.

	Total	Most Recent Course		
		7–8	9–10	11–12
Boys and Girls Together for All Sessions	81%	76%	83%	88%
Taught Separately for Some or All Sessions	19	24	17	11
n	1000	423	410	167

The vast majority of secondary school sex education is packaged as part of another course. More than eight in 10 (85%) teachers say the most recent 7th–12th grade sex education course they taught was part of some other course. A separate course is more common for younger students than older students. (See Table 5.)

**TABLE 5 TEACHERS: INDEPENDENT OR PACKAGED WITH OTHER COURSE?**

Teachers of 7th–12th grade sex ed.

	Total	Most Recent Course		
		7–8	9–10	11–12
As part of another course	85%	79%	90%	88%
As a separate course	8	13	5	5
As specific lessons taught independent of any other course	6	8	5	7
n	1000	423	410	167

When it is combined with another course, sex education typically is taught with health (75%). Less frequent pairings are with home economics and family or consumer science (18%) and science or biology (17%).

Slightly more than half (55%) of teachers say their most recent course consisted primarily of activities that encouraged student participation. Another fifth (22%) say they used a combination of both lectures and student participation. Just a fifth (22%) relied heavily on lectures. (See Table 6.)

**TABLE 6 TEACHERS: LECTURE OR CLASS DISCUSSION?**

Teachers of 7th–12th grade sex ed.

	Total	Most Recent Course		
		7–8	9–10	11–12
Primarily a lecture with some discussion	22%	22%	21%	24%
Primarily student participation	55	52	58	56
Combination of student participation and lectures	22	25	20	20
n	1000	423	410	167

### THE MAIN MESSAGE OF SEX EDUCATION

What are the actual messages of sex education in public secondary schools today? Students, teachers, and principals nationwide report that the large majority of sex education courses stress a comprehensive message, teaching that “young people should wait to have sex, but if they don’t, they should use birth control and practice safer sex.” Most teachers (61%) and principals (58%) say that their school’s sex education provides a comprehensive message; about one in three (33% of teachers and 34% of principals) report an abstinence-only message. Students are more likely than teachers to say their most recent sex education stressed a comprehensive (80%) as opposed to abstinence-only message (18%). The differences in responses from teachers and principals as compared with students are greatest in the later grades; there is more consistency with what younger students in 7th and 8th grades report where both teachers and students are more likely to report an abstinence-only approach (See Table 7). (See Box 1 for possible explanations for differences in responses.)

**BOX 1****Why Student and Teacher Descriptions of Sex Education May Differ**

The majority of teachers and students agree that the main message of sex education is a comprehensive one, stressing the importance of waiting to have sex but also discussing contraception and safer sex, yet teachers are almost twice as likely as students to report that abstinence-only was the main message emphasized (33% vs. 18%).

With regard to specific topics, students and teachers also report differences. Although their overall responses indicated a consistency with regard to how commonly specific topics are taught relative to other topics, with the exception of a few subjects teachers are more likely to say specific topics are taught than are students. However, three topics stand out as not falling into this pattern—abortion, birth control, and how to use condoms. For these three issues, students are significantly more likely than teachers to report these topics being included in some form in sex education.

While there are any number of possible reasons for these differences, some of the likely explanations include:

- Students may be more likely to report that topics were included in class simply because a fellow student asked a question and a discussion followed, while teachers may report covering only those topics that are a part of their lesson plans. Alternately, teachers may recall including certain topics while students recall only those topics that were discussed in-depth or those that seemed most relevant to them at the time.
- Teachers may feel constrained by personal or local pressure to report—or not to report—in a survey such as this one that their courses have a certain main message and include certain topics.
- It is also possible that students have picked up information from local media, friends, or health providers, and instead recalled learning about them as part of sex education.

**TABLE 7 TEACHERS, STUDENTS AND PRINCIPALS: MAIN MESSAGE OF PUBLIC SECONDARY SCHOOL SEX EDUCATION**

	Total	STUDENTS by Grade of Most Recent Sex Ed Course			Total	TEACHERS by Grade of Most Recent Sex Ed Course			Total	PRINCIPALS by Main Grade of Sex Ed

## WHAT IS TAUGHT IN SEX EDUCATION

### The “Core Elements”

While classifying the main message emphasized in a sex education course as either “comprehensive” or “abstinence-only” provides a sense of what happens in the classroom, it does not always predict which specific topics are included or excluded. However, the study did find that across the nation, regardless of the main message of sex education, courses almost certainly will include certain fundamentals or “core elements.”

Students and teachers report that the most commonly covered topics in public secondary school sex education are: HIV/AIDS (97% and 98% respectively), other STDs (93% and 96% respectively), the basics of reproduction (90% and 88% respectively), and abstinence (84% and 97% respectively). Other subjects, such as birth control, (82% and 74% respectively) abortion (61% and 46% respectively), and homosexuality (41% and 44% respectively) are not mentioned as often as the four “core elements”. (See Table 8.)

**TABLE 8 STUDENTS AND TEACHERS: OVERVIEW OF TOPICS TAUGHT IN PUBLIC SECONDARY SCHOOL SEX EDUCATION**

	STUDENTS by Grade of Most Recent Sex Ed Course				TEACHERS by Grade of Most Recent Sex Ed Course

### Safer Sex and Negotiation Skills

While sex education courses do a good job teaching the basics or “core elements,” safer sex and negotiation skills are covered less consistently, even in the later grades. Students seem to gain fewer practical skills for actually handling issues regarding sex. For example, while most sex education classes make some reference to birth control, fewer include more detailed information such as where to get it and how to use it (59% of students and teachers say it is included). Similarly, while both students and teachers report that HIV/AIDS and other STDs are a mainstay of sex education today, where to go to get tested (69% and 86% respectively) or how to talk to a boyfriend or girlfriend about a STDs (58% and 71% respectively) are discussed less commonly across sex education courses.

Another important communication skill that is less frequently covered in sex education courses is how to talk with parents about sex and relationship issues (62% of students and 71% of teachers say it is included). Similarly, key negotiation skills like how to deal with emotional issues and consequences of being sexually active (71% of students and 88% of teachers say it was included), are not likely to be as widely covered as the basics. In spite of an emphasis on abstinence in all types of sex education courses, at least one in five students (21%) say how to deal with pressure to have sex was not discussed in their most recent sex education course.

As with the main message of sex education, teachers’ and students’ responses also vary when it comes to whether specific topics are covered in sex education or not. Teachers are generally MORE LIKELY than students to report that a

subject was included. This is true for the topics of peer-pressure, the emotional consequences of sexuality, HIV and other STD testing, rape and sexual assault, and communication about sexual health issues. Although both students and teachers say all of these topics are more likely to be covered in later grades, the margin of difference remains relatively constant across grade levels. The notable exceptions to this trend are the subjects of condoms and other birth control, and abortion. Although both students and teachers say these topics are covered less frequently than many other topics, students are more likely than teachers to report that these subjects come up.

### THE USE OF FEAR-BASED APPEALS

While the large majority of students (78%) say their sex education generally presents sex as a “normal, healthy part of life,” almost one in five (18%) say sex is presented as “something to fear and avoid.” Teachers are more likely than students to report that their courses teach that sex is normal and healthy (90% vs. 78% respectively), with only five percent reporting that sex is discussed in a negative manner. (See Table 9.)

Fear-based appeals are more common in the lower grades. Approximately one in five students say their 7th–8th (22%) and 9th–10th (17%) grade courses presented sex as something to avoid and fear, as compared to what half as many (9%) say about 11th–12th grade courses. Teachers are more likely to describe their sex education courses as presenting sex as a healthy and normal, regardless of grade. (See Table 9.)

**TABLE 9 STUDENTS AND TEACHERS: “NORMAL AND HEALTHY” VS. FEAR-BASED MESSAGES?**

	STUDENTS by Grade of Most Recent Sex Ed Course				TEACHERS by Grade of Most Recent Sex Ed Course

No message	1	3	*	4	2	6	3	1
n	1099	507	498	94	1000	423	410	167

Issues that are often touchstones of negative or fear-based messages throughout society—such as abortion and homosexuality—are among the least covered in sex education. However, when students and teachers were asked how these topics, as well as masturbation, were handled when they did come up (whether as part of the curriculum or in response to a question), both groups agreed that they generally are discussed in a neutral manner, as “personal” or “normal” behavior. Nonetheless, a substantial minority say that these issues were presented as “immoral or wrong.” Teachers are more likely to say the topics did not come up at all. (See Table 10.)

#### DIFFERENCES IN TOPICS COVERED IN ABSTINENCE-ONLY AND COMPREHENSIVE SEX EDUCATION

As might be expected, the main difference between courses that emphasize a comprehensive or abstinence-only point of view is whether these include skills for those who are or might become sexually active. Courses that emphasize a comprehensive approach are more likely to—although not all do—cover safer sex and disease prevention skills such as how to get tested for HIV and other STDS, how to use condoms, and how to get and use birth control.

**TABLE 10 STUDENTS AND TEACHERS: HOW SENSITIVE ISSUES ARE PRESENTED WHEN DISCUSSED**

While students and teachers alike who term their sex education comprehensive do report more topics being included overall, it is less clear how “comprehensive” comprehensive sex education really is. For example, one third of students (37%) in courses with a comprehensive message say that how to use and where to get birth control was not included, and slightly more than one out of four students (28%) say that condom use was not discussed. Likewise, while sex educa-

tion courses that stress an abstinence-only message are less likely to include safer sex skills, some do. For example, almost half (48%) who describe the main message of their most recent sex education as abstinence-only report that information about “how to use and where to get birth control” other than condoms was included, and six in 10 (61%) say that condom use specifically was discussed. (See Table 11.)

**TABLE 11 STUDENTS AND TEACHERS: OVERVIEW OF TOPICS TAUGHT IN PUBLIC SECONDARY SEX EDUCATION BY MAIN MESSAGE**

n	209	872	337	609

Courses that emphasize an abstinence-only message also tend to be shorter in duration than those that emphasize a comprehensive message: Only 14 percent of teachers of an abstinence-only curriculum reported that their course lasted a quarter to half a semester, as compared to one in four (24%) teachers of courses with a comprehensive message. (See Table 12.) Gender segregation is also more common in courses emphasizing an abstinence-only message (25%) than in those with a comprehensive message (15%). (See Table 13.)

### PARENTAL NOTIFICATION AND INVOLVEMENT

Most parents receive some type of notification about their child's attendance in sex education. One in four principals (25%) say parents have to give permission for their child to take sex education, and half (53%) say parents are notified about sex education but do not have to sign a permission slip. In about a fifth of schools (22%) parents are not notified and are not required to indicate permission. (See Table 14.)

Policies differ by grade level. Parents of younger students are more likely than parents of older students to be both notified and asked to give permission for their child to take sex education.

Schools employ means other than notification to involve parents in their child's sex education. A majority of principals (58%) say their schools give students sex education materials to take home and share with their parents. A sizable minority of principals (39%) report that their schools hold parent orientation sessions to describe the curriculum and answer questions about it. Many principals (38%) also say their schools invite parents to attend classes to teach them about sexuality and sexual health issues. Most principals (78%) report that their school employs at least one of these methods to keep parents informed. For younger grades, principals may use all three of these methods. (See Table 15.)

# SECTION TWO

MAKING THE GRADE:  
A REPORT CARD  
FOR SEX EDUCATION

**PARENTS WANT SEX EDUCATION TO  
COVER MORE THAN WHAT STUDENTS SAY  
IS TAUGHT TODAY.**

# MAKING THE GRADE: A REPORT CARD FOR SEX EDUCATION

One way to understand more about the quality and content of sex education programs is to ask students, parents, and educators their opinions of the quality of teaching and learning that takes place in school today. All three groups indicate overall satisfaction with the way sex education is taught, but raise important issues about what may be absent from the curriculum.

Overall, sex education gets high marks in schools today from students, teachers, and principals. Students say that their teachers are well prepared to instruct their courses and understand students and the issues they face. Students gave their teachers mostly As and Bs when asked how well their teachers taught them about the basics of pregnancy and birth, waiting to have sex, talking with their parents about sex, use of birth control, and other skills. Principals and teachers also give sex education high marks for how well it helps prepare young people to handle the sexual issues they may face.

How do parents rate sex education? Though they are supportive of sex education, many parents acknowledge that they know little about what their children are being taught. When asked what they would want taught, parents report wanting sex education to cover MORE than many classes currently do. While parents support covering HIV/AIDS, STDS other than HIV/AIDS, and the basics of reproduction and abstinence—the core of most sex education curricula, they particularly want students to learn more about safer sex and negotiation skills than classes currently address. The greatest gap between what parents want covered and what is being covered is in teaching students about what to do about rape or sexual assault, how to talk to parents or a partner about sex and birth control, how to use and where to get birth control, and how to deal with the emotional issues and consequences of being sexually active. Nearly 80 percent of parents say abortion and homosexuality—two of the least frequently covered topics—should be included in sex education courses. They also say these topics should be discussed in a balanced manner.

Parents also believe that sex education merits additional classroom time. Currently, sex education courses typically only last for one to three class sessions. Sixty-five percent of parents want sex education to last substantially longer—half of a semester or more. Nearly half of teachers and principals agree that too little time is spent on sex education.

This section assesses sex education by examining the grades students and educators give to their classes as well as parents' views about what they want schools to be teaching their children when it comes to sexual health issues.

## STUDENTS, PARENTS, AND EDUCATORS GRADE SEX EDUCATION

A solid majority of students who have taken secondary school sex education say overall their most recent course deserves a “good” or “excellent” grade, and their parents concur. Seven in 10 students (70%), and 58 percent of their parents, give their sex education course a mark of B or higher, including a third of students (32%) and 23 percent of parents who give a grade of A. Seventh and eighth grade sex education generally gets lower grades from students than sex education that comes later in school. (See Table 16.)

Students give somewhat higher grades for courses that last a half a semester or longer rather than just a few class periods. Boys are also somewhat more satisfied with sex education than their female classmates. (See Table 17.)

Principals' grades of their school's sex education are very much on par with the reports of students and parents: half give a solid B, and 21 percent give an A grade. (See Table 18.)

Parents also say they have confidence (27% “very confident” and 44% “somewhat confident”) that their children's sex education is presenting attitudes and values similar to their own.

**TABLE 16 STUDENTS AND PARENTS: A REPORT CARD ON SEX EDUCATION**

### Students Grade their Sex Education Teachers

One reason 7th–12th grade sex education gets high marks may be that students like their teachers. Four in 10 say their most recent 7th–12th grade sex education teacher deserves an A (43%), and another third give their teacher a B (32%). A few students are critical and give a C or lower (25%). Students are particularly pleased with sex education teachers in upper grades, as slightly more than half of 11th–12th grade teachers were rated an A (54%). (See Table 19.)

**TABLE 19 STUDENTS: A REPORT CARD ON SEX EDUCATION TEACHERS**  
Students who had sex ed in 7th–12th grade.

	Total	Most Recent Course		
		7–8	9–10	11–12

C) Average	15	17	15	12
D) Poor	5	6	4	2
F) Very poor	5	5	5	1
n	1099	507	498	94

Moreover, students say sex education teachers understand them personally. Eight in 10 say their most recent teacher understood them very well (43%) or somewhat well (40%). Eleventh and twelfth grade students say their teachers do a better job understanding students (53%) than teachers of 7th–8th grade sex education (40%). (See Table 20.)

Not too well	10	12	9	6
Not well at all	6	6	6	4
n	1099	507	498	94

### HOW WELL SEX EDUCATION HAS PREPARED STUDENTS

Students were asked to grade how well their most recent sex education course prepared them for dealing with specific sexual health issues or situations. Approximately two-thirds of students give their sex education an A or a B in terms of teaching them the basic facts of reproduction, the importance of waiting to have sex and dealing with pressure to have sex, and the emotional consequences of sex. Fewer give high grades—although overall the marks are still good—for preparing them to know how to use or where to get birth control or how to talk about sexual issues with their parents or a boyfriend or girlfriend. Since these topics were less frequently covered in sex education, many students gave a D or failing grade reflecting that the topic was not included. (See Table 22.)

**BOX 2****Who Teaches Sex Education?**

The typical secondary school sex education teacher has taught sex education for several years and has been trained formally to teach sex education. The majority (68%) of sex education teachers have taught the subject for more than five years, with almost half (46%) teaching sex education for more than 10 years and one-third (30%) teaching for more than 15 years. One-third (32%) of sex education teachers have taught fewer than five years. (See Table 21.) Most teachers (82%) have been trained to teach sex education, and most of these teachers (86%) feel they received enough training to teach sex education well. Most principals (76%) agree that teachers have received enough training to teach sex education well.

Sex education teachers teach other subjects along with sex education. A large majority (71%) report spending less than a quarter of their time teaching sex education in the last two years, and just seven percent are assigned more than half of their teaching load to sex education. The main subject(s) of teachers who teach sex education are: health (56%), physical education (14%), biological and physical sciences (10%) and home economics and family or consumer science (11%).

## WHAT DO PARENTS WANT?

Parents report wanting sex education in secondary schools to cover as much as, and often much more than, what students say is actually taught today. Not only do parents strongly support covering the “core elements” already taught in most sex education—HIV/AIDS (98%), STDs other than HIV/AIDS (98%), the basics of reproduction (90%), and abstinence (97%)—they are as likely, or even more likely, to want sex education to cover topics that are not taught uniformly. Parents want students to be taught many of the safer sex and negotiation skills. These include how to talk with parents about sex and relationship issues (97%), what to do if you or a friend has been raped or assaulted (97%), how to deal with pressure to have sex (94%), and how to deal with emotional issues and consequences of being sexually active (94%). (See Table 23.)

Parents also don’t want sex education to shy away from more sensitive topics—such as abortion (79% say should be discussed) and homosexuality (76%). They also specify overwhelmingly—74 percent—that when these topics do come up they should be “discussed in a way that provides a fair and balanced presentation of the facts and different views in society.”

Most parents (65%) say that if the topic of when young people should begin having sex is brought up, sex education should teach that “young people should wait to have sex, but if they don’t they should use birth control and practice safer sex;” one third (33%) say that if the topic comes up, abstinence as the only option until marriage should be presented.

1 “Very” and “somewhat” responses are used here.

### When do Parents Think Sex Education Should Start?

Virtually all parents, teachers, principals and students want some form of sex education taught in secondary school, and all overwhelmingly support teaching high school students a broad range of topics including birth control and safer sex. For middle and junior high school students, support is more divided; about half or more of students, parents, teachers, and principals favor teaching all aspects of sex education.

Between 30 and 40 percent say only reproductive “basics” should be taught in 7th and 8th grades. A majority of students, parents, teachers, and principals agree that some form of sex education—generally just the basics, like “how babies are made”—should start by 5th grade. However, more than half of teachers, nearly half of all principals, and a third of parents say it should start even earlier. (See Table 24.)

**TABLE 24 STUDENTS, PARENTS, TEACHERS AND PRINCIPALS: WHAT SHOULD SEX EDUCATION TEACH?**

### ... And How do they Want the Classes to Look?

Two in three parents say that sex education should have more classroom time. While sex education courses last only one or several class periods according to most teachers (74%), only one in four (26%) parents say that this is how long classes should last. The majority (65%) of parents say that sex education should last at least a half of a semester or quarter or more. In fact, four in 10 (38%) parents say that sex education should last an entire semester or even a full year. (See Table 25.)

Many teachers and principals agree with parents. About half of teachers (47%) and four in 10 principals (42%) say that too little time is spent in sex education. The remaining teachers (50%) and principals (55%) say that enough time is spent on sex education. (See Table 26.)

**TABLE 26 TEACHERS AND PRINCIPALS: IS ENOUGH TIME DEVOTED TO SEX EDUCATION?**

	Teachers	Principals
Too little time	47%	42%
Enough time	50	55
Too much time	1	3

Contrary to current practice where most sex education courses are coed (81% according to teachers), many parents would prefer that sex education sessions be taught in gender-segregated classes. Just over half of parents (54%) say there is a benefit in having separate sex education courses for boys and girls, while four in 10 (40%) say it would be best if boys and girls were taught together. (See Table 27.)

# SECTION THREE

THE REAL WORLD:  
DOES SEX EDUCATION MATTER?

**STUDENTS WHO HAVE HAD SEX EDUCATION  
KNOW MORE AND ARE BETTER PREPARED  
THAN THOSE WHO HAVE NOT.**

## THE REAL WORLD: DOES SEX EDUCATION MATTER?

Students say they need more information about sexual and reproductive health issues than they are getting in school. More or close to half of those who have had sex education say they need to know more about what to do if a friend has been raped or sexually assaulted (55%); testing for HIV/AIDS (51%); HIV/AIDS (47%) and other STDs (50%); the emotional pressures and consequences of sex (46%); and how to talk with a boyfriend or girlfriend about birth control and STDs (46%).

Even when a topic is discussed in sex education—including those most commonly covered such as HIV/AIDS—many students still say they need to know more, indicating that at least some classes may not be exploring issues as thoroughly as students would like. For example, almost half of students in a sex education course that included HIV/AIDS in the curriculum (46%) want still more information. Similarly, among students whose most recent sex education mentioned birth control, a full 40 percent say they still don't know enough.

Students are equally likely to report wanting information across all topics, regardless of the approach of their sex education. Students whose most recent class taught a more comprehensive message were as likely as those in abstinence-only classes to want more information about waiting to have sex (36% comprehensive vs. 37% abstinence-only). Similarly, about a third of students in both types of sex education report wanting more information about condoms and other methods of birth control, including how to use it and where to get it.

As part of the survey, students are questioned about their base knowledge about pregnancy and disease prevention. In spite of the limitations indicated by students' information needs, students who have had sex education are more knowledgeable than those who have not. Ten knowledge questions were compiled to form a summary index of how knowledgeable students are about a range of reproductive and sexual health issues from risk of pregnancy to how STDs are spread. Among those who have had sex education, one-third (30%) have a high level of reproductive health knowledge, answering nine or all 10 of the questions correctly; only half as many (15%) of those who have not had sex education have a high level of knowledge.

Students' sense of self-preparedness also provides insight into how well equipped they perceive themselves to be to handle various sexual health decisions and situations. Again, students who have had some form of sex education during their secondary school years do feel better able to deal with the pressures to have sex—including deciding to wait—as well as how to communicate about sexual issues and knowing where to get and how to use birth control. However, even among those who have taken sex education, most say they are not fully prepared for the various decisions or circumstances they may find themselves facing.

There were no differences in students' overall sense of preparedness by the approach of their most recent sex education; however, there were noteworthy differences in students' level of knowledge about select sexual and reproductive health issues. Students in comprehensive sex education overall knew more about pregnancy and disease prevention than those whose most recent sex education took an abstinence-only approach.

This section assesses how relevant sex education is in terms of what students themselves say they need to know. It also looks at how well prepared students themselves say they are to handle a range of sexual decisions and situations—from dealing with pressure to have sex to knowing where to get and how to use birth control if they needed to—and their base level of knowledge.

### STUDENTS WANT MORE INFORMATION FROM SEX EDUCATION

Even students who have had sex education are hungry for more information about both the basics and more complex skills. Three subjects top students' most wanted list: what to do if they or a friend are raped or sexually assaulted (55%), how to get tested for STDs (51%), and information about STDs (50%). Roughly one in two American public school students who have had sex education seek more information on these three subjects. Nearly as many say they want more information on HIV/AIDS (47%), one of the most often covered topics in sex education today. (See Table 28.)

**TABLE 28 STUDENTS: INFORMATION NEEDS BY WHETHER HAD SEX ED OR NOT**

n	1099			1099		

As might be expected, students in classes where a particular topic is not covered are generally more likely, as compared with those in classes that do, to want more information on that issue. However, just covering a topic is not enough. Many students say even if their most recent sex education included an issue that was not always enough: between one in four to as many as half still wanted to know more.

For example, 46 percent of those in classes that covered HIV/AIDS want more information, as do 40 percent of those in classes that covered birth control and 39 percent of those that discussed dealing with pressures to have sex. The implication is that sex education may not always cover issues as thoroughly as students want them to. (See Table 29.)

### WHAT STUDENTS KNOW (AND DON'T) ABOUT SEXUAL HEALTH

To gauge reproductive health knowledge, students were asked a series of questions about the basics of reproduction, birth control, emergency contraception, and HIV and other STDs. Students who had sex education in secondary school are more knowledgeable than those who did not. (See Table 30.)

There is a startling gap between those who have and have not had sex education in secondary school regarding student knowledge about the risk of pregnancy. A sizeable minority

who have not had sex education—a quarter of 7th–8th graders (25%) and 15 percent of 9th–12th graders—say they think that a teenage girl can not conceive the first time she has sex. Notably fewer students who have had sex education share this misperception (18% and 6% respectively)<sup>2</sup>. Students who have had sex education are also better informed about free or low-cost birth control services for teens. Eight in 10 9th–12th graders who have had sex education (80%) know that teens qualify for free or low-cost birth control services, while fewer who have not had sex education (73%) know this. (See Table 30.)

**TABLE 30 STUDENTS: PREGNANCY AND HIV/STD PREVENTION KNOWLEDGE BY WHETHER HAD SEX EDUCATION OR NOT**

Drug stores will sell condoms to young people under 18 years of age	73	58	50	48	80	74
n	1099	372	280	230	819	142

<sup>2</sup> Students giving incorrect responses as well as “don't know” responses are considered misinformed.

**BOX 3****A Pregnancy and HIV/STD Prevention Knowledge Index**

The knowledge index is a sum scale ranging from 0 to 10 based on the number of correct answers given by students to 10 statements. Students who gave 9 or 10 correct answers are presented as rating “high” on the knowledge index, 7 to 8 correct answers were rated as “medium,” and 0 to 6 were rated as having low reproductive knowledge. The scale was based on the following 10 questions which ask students to choose the correct statement:

- Young people under 18 years of age need their parent’s permission to get birth control pills—or young people can get birth control pills without their parent’s permission
- A doctor’s prescriptions is needed to buy birth control pills—or birth control pills can be bought without a prescription at drug stores.
- Drug stores will sell condoms to young people under 18 years of age—or young people CANNOT buy condoms without their parent’s permission
- Emergency contraceptive pills are taken BEFORE unprotected sex to prevent pregnancy—or emergency contraceptive pills are taken AFTER unprotected sex to prevent pregnancy.
- A teenage girl can get pregnant the first time she has sexual intercourse—or a teenage girl cannot get pregnant the first time she has sexual intercourse.
- All teens qualify for FREE or low-cost birth control services at their local family planning clinic,—or only teens that are 18 years or older qualify for these FREE or low-cost services.
- Sexually active teens should not get tested for STDs and HIV/AIDS every year, unless they have symptoms—or sexually active teens should get tested for STDs and HIV/AIDS every year, even if they don’t have any symptoms.
- A person with an STD can spread the STD to a sexual partner EVEN if the person has no symptoms—or STDs can ONLY be spread to a sexual partner if the person has clear or visible symptoms.
- Yes or no: Do you think people can get HIV, the virus that causes AIDS by sharing needles when using drugs?
- Yes or no: Do you think people can get HIV, the virus that causes AIDS by having sexual intercourse?

**A Pregnancy and HIV/STD Prevention Knowledge Index**

Taken together, the ten knowledge questions form a summary measure of how knowledgeable students are about reproductive health (See Box 3). Among those who have had sex education in secondary school, one-third (30%) have a high level of reproductive health knowledge, answering nine or all

10 of the questions correctly; half as many (15%) of those who have not had sex education have a high level of knowledge. Conversely, 42 percent of students who have not had sex education have a low level of knowledge—more than double the one out of five who have had sex education (21%). (See Table 31.)

**TABLE 31 STUDENTS: PREGNANCY AND HIV/STD PREVENTION KNOWLEDGE INDEX BY WHETHER HAD SEX EDUCATION OR NOT**  
Students in 7th–12th grade.

	CURRENT GRADE					
	Total 7–12		7–8		9–12	
	Had Sex Ed in 7–12	Have Not Had Sex Ed in 7–12	Had Sex Ed in 7–8	Have Not Had Sex Ed in 7–8	Had Sex Ed in 7–12	Have Not Had Sex Ed in 7–12
High	30%	15%	11%	7%	35%	29%

Low	21	42	42	51	15	27
n	1099	372	280	230	819	142

**HOW WELL PREPARED STUDENTS FEEL GENERALLY TO HANDLE SEXUAL DECISIONS AND SITUATIONS**

Among students who have had sex ed, a majority consider themselves to be “very prepared” to wait to have sex until older or married (61%), and to understand the basics of reproduction (60%). Six in ten students who have had sex ed (59%) say they are “very prepared” to know how to use condoms if they decide to have sex. (See Table 32.)

While six in ten 7th–12th graders who have had sex education during secondary school (59%) say they are “very prepared” to deal with the pressure to have sex, just four in ten students who have not had sex education (42%) feel as capable. Students who have had sex education are also more likely than those who have not to say they feel “very prepared” to deal with the emotional issues and consequences of sexual activity (45% vs. 34%) and to talk more openly about sexual issues with their parents (42% vs. 36%) and boy or girlfriends (50% vs. 34%). (See Table 32.)

Feel very prepared	47	27	28	18	52	40
Feel somewhat prepared	33	29	39	28	31	30
n	1099	372	280	230	819	142

**BOX 4****A Preparedness Index**

The index of preparedness is an average sum scale ranging from 1 to 4 based on the four-point scale where “very prepared” is a “1” and “not at all prepared” (as well as “don’t know” or “refused”) a “4.” Students expressing the highest level of preparedness are assigned a “4” and those the lowest, a “1”. For descriptive purposes, the index will be presented with 3 levels—high preparedness (mean value 1 thru 1.49), medium preparedness (1.5 thru 2.49) and low preparedness (2.5 thru 4). The index is based on how prepared the student said they were to the following eight questions:

- Understand the basics of how babies are made, pregnancy and birth
- Wait to have sex until older or married
- Deal with the emotional issues and consequences of being sexually active
- Deal with pressure to have sex
- Talk with a partner about birth control and STDs
- Talk with your parents about sex and relationship issues
- Know how to use condoms, if you decided to have sex
- Know how to use and where to get other birth control, if you decided to have sex

**A Preparedness Index**

Students were asked a series of questions to assess their sense of preparedness to handle a range of sexual decisions and situations (See Box 4). Whether or not a student had had sex education during secondary school made a notable difference: four in 10 students who have had sex education in secondary school report an overall high level of preparedness (39%), as compared to 20 percent of those who have not had sex education who fall into this category. Conversely, students who have not had sex education are more likely to rate low on a general preparedness scale (26%) than those who have had sex education (9%). (See Table 33.)

A majority of 7th–12th grade students who have taken sex education fall into a mid-range level of self-preparedness when all the measures are factored together in an overall “preparedness index.” Students report feeling more prepared as they get older—just 24 percent of those who have had sex education in 7th–8th grade are among the most prepared group. Even so, only four in 10 high school students (43%) who have had sex education in secondary school rate in the highest level of preparedness. (See Table 33.)

**TABLE 33 STUDENTS: PREPAREDNESS INDEX BY WHETHER HAD SEX EDUCATION OR NOT**

n	1099	372	280	230	819	142

## DIFFERENCES IN INFORMATION NEEDS, LEVELS OF KNOWLEDGE AND SENSE OF PREPAREDNESS AMONG STUDENTS BY MAIN MESSAGE OF SEX EDUCATION

### INFORMATION NEEDS

While having sex education or not is a factor in students' information needs, the approach of sex education does not make much difference in this regard. That is, overall, students in abstinence-only and comprehensive sex education classes were equally likely to report wanting information across a range of topics. What matters more is whether

a particular issue was included or not in a class versus what the main message is. Students in both types of sex education say they need more information about waiting to have sex (37% of those in abstinence-only and 36% of those in comprehensive) and want more about how to use condoms (30% for each group). (See Table 34.)

**TABLE 34 STUDENTS: INFORMATION NEEDS BY MAIN MESSAGE OF SEX ED**  
Students who had sex ed in 7th–12th grade.

<b>“Core Elements”</b>	<b>Abstinence-Only</b>	<b>Comprehensive</b>
HIV/AIDS	50%	46%
STDS other than HIV/AIDS, such as herpes	51	49
The basics of pregnancy and birth	23	22
Waiting to have sex	37	36
<b>Other Topics</b>

<b>Safer Sex and Negotiation Skills</b>		
How to deal with pressure to have sex	40	42
How to deal with emotional issues and consequences of being sexually active	44	46
How to get tested for HIV/AIDS and other STDS	52	51
How to use condoms	30	30
How to talk with parents about sex and relationship issues	40	43
How to use and where to get other birth control	39	41
What to do if you or a friend has been raped or sexually assaulted	52	56
How to talk with a partner about birth control and STDS	45	46
n	209	872

**KNOWLEDGE**

The approach to sex education does matter when it comes to students' knowledge about reproductive and sexual health. Students who most recently took a course with an abstinence-only approach are less knowledgeable than students whose last course was comprehensive across most topic areas: thirty-three percent of students in comprehensive sex education fall into the high knowledge category as compared to 19 percent of those in abstinence-only classes. The only exception came in students' knowledge about HIV—the large majority of students, regardless of the approach of their sex education course, correctly answered questions related to this issue. (See Tables 35 and 36.)

**TABLE 35 STUDENTS: PREGNANCY AND HIV/STD PREVENTION KNOWLEDGE INDEX BY MAIN MESSAGE OF SEX EDUCATION**

### PREPAREDNESS

Students whose most recent sex education courses emphasized an abstinence-only message were more likely than those who said their sex education was comprehensive to report feeling “very prepared” to wait to have sex until older or married (70% vs. 59%), the principal goal of abstinence-only programs. Students in comprehensive sex education, on the other hand, were more likely to report feeling “very prepared” to use condoms if they decided to have sex (61% vs. 52%). In most other areas, students in both types of courses say they feel similarly prepared. (See Tables 37 and 38.)

# SECTION FOUR

THE POLITICS OF  
SEX EDUCATION:  
WHO DECIDES WHAT  
GETS TAUGHT?

**MOST SCHOOLS ARE REQUIRED TO FOLLOW  
STATE OR LOCAL GUIDELINES FOR SEX  
EDUCATION.**

# THE POLITICS OF SEX EDUCATION: WHO DECIDES WHAT GETS TAUGHT?

Today most Americans agree that some form of sex education should be included in a student's academic career. Yet, which topics are taught—and what messages emphasized—continue to be debated in local communities and state legislatures across the country. According to this study, as many as one in two public secondary school principals (48%) report that their school considered some aspect of sex education during the last few years, including what topics are covered and whether to teach sex education at all. However, most (66%) say their school's curriculum remained unchanged in the end.

So, who ultimately decides what is taught in sex education today? Principals report that the most influential players in sex education are their local governments and school districts: nearly nine in ten say they have at least "some" influence. Fewer principals say state government plays a significant role in determining what is taught in their schools: twenty-seven percent cite a "great deal" and 43 percent cite "some" influence. However, most principals do acknowledge that their schools are required to follow local and/or state guidelines for sex education: forty-three percent report having "strict guidelines," while another 42 percent say they have "some guidelines." (Just 13 percent say the curriculum is set "pretty much" by the school.) In fact, as of July 2000, 18 states had legislation requiring that sex education be taught in school, and 34 states plus the District of Columbia mandate that schools provide STD/HIV education.<sup>3</sup> State policies vary on what topics and messages—if any—are specified as needing to be taught.

For the most part, policies governing sex education in schools are made at the state and local level. Federal government involvement in sex education has been relatively limited. The Congress has provided funding for abstinence-only education since 1981 under the Adolescent and Family Life Act. More recently, through the Temporary Assistance to Needy Families Act (TANF) passed as part of welfare reform, more than \$250 million additional federal dollars were made to states over five years to promote abstinence-unless-married messages through community-based as well as in-school programs. At the time of the survey, which was conducted at the latter part of the first year the new funding was available for use, it appeared to have little impact on the sex education curriculum of most public secondary schools. Just 8 percent of principals reported a "great deal" of influence; 23 percent "some" as a result of the TANF funds.

Although many schools have guidelines they must follow, most principals report that teachers, along with school boards, superintendents, and other school administrators are also "very involved" in determining the sex education curriculum in many schools. Approximately one in four principals report that parents are "very involved" in setting the curriculum.

This section examines roles of different groups—including school boards and local, state, and federal government—in setting sex education curriculum in schools as well as the extent of discussion or debate in local communities in recent years over sex education.

## WHO INFLUENCES WHAT IS TAUGHT?

A majority (57%) of public secondary school principals say their school district and/or local government has a "great deal of influence" in determining what topics are covered as part of their school's sex education; an additional 31 percent say these groups have "some influence." Fewer principals say state and federal government is influential in setting sex education curriculum (27% "great deal," 43% "some"). (See Table 38.)

The federal government's abstinence-only funds, provided under the 1996 welfare reform law, appear not to have had a large effect on curricula; half of principals (55%) say these funds have had little or no influence at all. At the time of the survey, which was conducted at the end of the first school year that funding was available, just eight percent of principals reported a "great deal" of influence, and 23 percent "some," as a result of the new abstinence funding. Principals of high schools were more likely to say the funds had little or no influence (61%) than those heading up middle and junior high schools (44%) were. Interestingly, 15 percent of principals say they do not know how much the federal government's abstinence-only funds had influenced their school's curriculum. (See Table 38.)

**TABLE 38 PRINCIPALS: GOVERNMENT INFLUENCE ON CURRICULUM DEVELOPMENT BY GRADE AND APPROACH OF SEX EDUCATION**  
Principals of schools with 7th–12th grade sex ed.

	Total	PUBLIC SECONDARY SCHOOL PRINCIPALS Grades Taught <sup>4</sup>		Main Message of Sex Ed	
		7–8	9–12	Abstinence-Only	Comprehensive

n	300	111	138	107	165

Local and federal government influence is only slightly more likely in schools that teach sex education with an abstinence-only message than a comprehensive one: thirty percent of principals heading up schools in which comprehensive sex education is taught say the federal funds have had at least some influence on their curriculum, as do 37 percent of principals in schools that stress abstinence-only messages. Principals of schools that teach an abstinence-only message are also somewhat more likely to say local governments or school districts have a great deal or some influence (94%) on their sex education curriculum as compared with principals of schools teaching comprehensive sex education (85%). (See Table 38.)

<sup>4</sup> In this section principals were classified as 7–8 if their school taught either 7th or 8th grade and no grades 9–12. Many principals of 7–8 grade also reported teaching 6th grade. Principals were classified as 9–12 if their school taught only grades nine or above.

### CURRICULUM GUIDELINES

Most sex education teachers report that what they cover and how they teach it is due at least in part to curriculum guidelines. About three in 10 sex education teachers (29%) report having to follow “strict guidelines” about what they can teach, and another 48 report having “some guidelines.” One in four (23%) say what they teach is “pretty much” up to them to decide. (See Table 39.)

Principals are more likely than teachers to report that there are strict guidelines (43% compared to 29% of teachers), and that their teachers use materials provided by the school district (74% vs. 54%, respectively). Sex education in middle and junior high school appears to be subject to more controls than sex education in high school. A third of teachers (35%) say they must follow strict guidelines for teaching 7th-8th grade classes, compared with 24 percent of those teaching 9th-12th grade sex education. Teachers are also more likely to be required to use district-approved materials rather than their own materials in middle and junior high schools.

Teachers and principals whose sex education courses emphasize an abstinence-only message are more likely to report oversight than those who teach primarily a comprehensive message. Forty-one percent of abstinence-only teachers say they are required to follow “strict guidelines,” and two-thirds (65%) are required to use district-supplied materials. By contrast, 24 percent who teach a comprehensive message are required to follow “strict guidelines,” and half (50%) must use materials supplied by their school district. School principals say their teachers need to follow stricter guidelines for sex education that emphasizes an abstinence-only message (52%) than a comprehensive message (34%). (See Table 40.)

**TABLE 39 TEACHERS AND PRINCIPALS: GUIDELINES AND MATERIALS**

Guidelines	TEACHERS By Grade of Most Recent Sex Ed Course			PRINCIPALS By Grades Taught		
	Total	7-8	9-12	Total	7-8	9-12

**COMMUNITY INVOLVEMENT**

A wide variety of community members are involved in sex education curriculum development. Principals say that teachers are by far the most involved; nine in 10 principals (88%) say that teachers are at least somewhat involved in determining what topics sex education will cover. The school board and administrators and parents do not fall far behind. Seven in 10 principals say that the school board and administrators (72%) and parents (68%) are involved in curriculum development. Several other community members are at least somewhat involved. Students (39%), religious leaders (46%) and local politicians (20%) all exercise some influence on what topics are discussed in sex education. (See Table 41.)

**TABLE 41 PRINCIPALS: COMMUNITY INVOLVEMENT IN CURRICULUM DEVELOPMENT**

### EXTENT AND IMPACT OF PUBLIC DEBATE ON SEX EDUCATION

As many as half of principals (48%) report discussions or debates about some aspect of sex education over the past few years at local school boards, PTA meetings, or other public forums. These discussions or debates revolve more around how sex education should be approached rather than whether it should be taught at all.

The most commonly reported topic of discussion—by 31 percent of principals—is whether to teach abstinence-only sex education. This issue was just as likely to have been raised in schools where the current sex education is termed comprehensive as it was in those where it is abstinence-only. A quarter of principals (26%) say that whether or not to teach specific topics also has been the subject of debate. Only 17 percent of principals say discussions took place over whether to teach sex education at all in the past two years. (See Table 42.)

**TABLE 42 PRINCIPALS: DISCUSSIONS OR DEBATES IN PAST TWO YEARS**  
Principals of schools with 7th–12th grade sex ed.

	Total	PRINCIPALS By Grades Taught	
		7–8	9–12
Teaching abstinence-only	31%	26%	34%
Topics to teach in sex ed, such as birth control or sexual orientation	26	27	26
How parents give permission for children to take or be taken out of sex ed	26	27	25
Whether or not to teach sex ed at all	17	17	22
Whether sex ed should be coed or not	16	20	14
n	300	111	138

The tenor of these public discussions is most often described by principals as “calm” with 39 percent saying they were in fact “very calm”; another 37 percent say “somewhat” so. Just 15 percent say the debates regarding sex education that occurred in their schools became at all heated. Principals in schools that teach primarily an abstinence-only message are as likely to describe the discussions as calm as principals from schools that teach a comprehensive message.

These discussions or debates do not often result in curriculum changes. When they do, there seems to be little net change in sex education from a national perspective. Over half of principals (58%) say changes were not made to their school's sex education curriculum due to public discussion, yet a significant minority of one-third (34%) do report changes. When the curriculum is altered, principals report that the most common changes are in the coverage of certain subjects. Two in ten principals say that the changes resulting from public debate were that subjects once covered are now not covered (19%) or that subjects once not covered are now included (17%). Fourteen percent say that the curriculum was changed to an abstinence-only format; while another 12 percent report the reverse, saying that the school's curriculum was modified from abstinence-only to more comprehensive.

While public debates are not causing an overwhelming change in sex education, principals report that when they do not teach certain topics, school policy and community pressure are among the top reasons. The most common topics NOT taught in sex education—those not taught in one out of two courses—are abortion, homosexuality, and how to use condoms. Principals report that these topics are not taught primarily because of school policy (14–18% of principals), followed by pressure from the community (10–11% of principals). For most other topics that principals report not teaching, the reasons are generally evenly divided among actual or perceived pressure from the community, school policy, not enough time, or that the topic will be covered later or has already been covered.

# APPENDIX ONE

**58 KNOWLEDGE, PREPAREDNESS AND INFORMATION NEEDS:  
7TH–12TH GRADE STUDENTS**

# KNOWLEDGE, PREPAREDNESS AND INFORMATION NEEDS: 7TH–12TH GRADE STUDENTS

This appendix provides a snapshot of teen life today—outside of the context of whether or not they have had sex education, or the approach of that sex education—and looks at young people's overall knowledge, self-preparedness and information needs with regard to sexual and reproductive health. This analysis looks across all students in these areas by grade/age, gender and sexual experience. These additional dimensions enhance the picture of sex education in America today by shedding light on the population of young people it serves.

## KNOWLEDGE

Students in 7–12th grade are very knowledgeable about basic information on HIV/AIDS, but they are misinformed in several other areas of sexual health. Almost all know that people can get HIV by sharing needles when using drugs (98%) or having sexual intercourse (97%). Many students know that a teenage girl can get pregnant the first time she has sexual intercourse (88%), and that sexually active teens should get tested for STDs and HIV/AIDS every year, even if they don't have symptoms (85%). In other areas, students do not fare as well. (See Table 43)

Half of all students (49%) do not know that they can get birth control pills without their parents' permission, and half (52%) do not know that emergency contraceptive pills are taken after unprotected sex to prevent pregnancy. More than one out of four incorrectly say that young people need parents' permission to buy condoms (27%), and more than one out of three (35%) incorrectly say that birth control pills can be bought without a prescription at drug stores.

Girls are more likely than boys to have greater knowledge about sexual health issues. Girls are more likely than boys to know that young people can get birth control pills without parental permission (53% vs. 42%), but that they do need a doctor's prescription (64% vs. 55%). And girls are more likely to know that young people can buy condoms without parental permission (72% vs. 67%), and that a person with an STD can spread it to a sexual partner even if they have no symptoms (85% vs. 79%). Girls are also more likely to know that emergency contraception is taken after and not before sex to prevent pregnancy (43% vs. 37%).

**TABLE 43 STUDENTS: PREGNANCY AND HIV/STD PREVENTION KNOWLEDGE, BY GRADE, GENDER AND SEXUAL EXPERIENCE**  
Students in 7th-12th Grade: Percent Answering Correctly

	Total	Current Grade			Gender		Sexual Experience	
		7–8	9–10	11–12	Boys	Girls	Had Sex	Not Had Sex
<b>Pregnancy Prevention</b>								
A teenage girl can get pregnant the first time she has sexual intercourse	88%	79%	90%	95%	85%	91%	94%	86%
Youth under 18 can get birth control without parental permission	48	34	51	58	42	53	60	44
All teens qualify for free or low cost birth control services	72	57	78	80	71	73	84	68
A doctor's prescription is needed to buy birth control pills	60	57	56	65	55	64	62	59
Emergency contraceptive pills are taken after unprotected sex	40	29	42	48	37	43	51	36
<b>HIV/STD Prevention</b>								
A person can get HIV by sharing needles	98	96	98	100	98	98	99	98
A person can get HIV by having sexual intercourse	97	93	99	99	96	98	99	96
Person with an STD can spread it to a sexual partner even if the person has no symptoms	82	73	85	88	79	85	86	81
Sexually active teens should be tested every year, even if they don't have symptoms	85	80	85	90	84	86	89	84
Drug stores will sell condoms to young people	69	49	75	84	67	72	84	64
n	1501	525	507	469	727	774	365	1136

Sexually active students are generally more knowledgeable about these sexual health issues than those who are not sexually active. This could be because sexually active teens have had to confront these issues in their own lives and may have looked for the information, or found out, from friends, parents, school or other resources. While sexually active teens are more knowledgeable, it is concerning that a large percent of these teens still do not know basic facts. More than one-third of sexually active teens do not know that they can get birth control pills without their parents' permission (37%), and four in ten (44%) incorrectly say that emergency contraception is taken before sexual intercourse to prevent pregnancy. Also, more than one in ten sexually active teens incorrectly say that young people need parental permission before buying condoms (14%) or that STDs can only be spread to a sexual partner if the person has clear or visible symptoms (12%). Given that one in four sexually experienced teens gets an STD each year, it is a concern that as many as one in ten do not know that they can buy condoms on their own.

### PREPAREDNESS

A majority of students rate themselves as very prepared to wait to have sex until older or married (60%), and about half say they are very prepared to understand the basics of reproduction (55%), and how to use condoms if they decided to have sex (55%). While younger students are more likely to say they feel prepared to wait to have sex than older students, they are also less likely than older students to say they feel prepared on other sexuality issues. Students in 7th–8th grade say that the area where they feel least prepared is how to use and where to get birth control, if they decide to have sex (44% said they felt not too prepared or not prepared at all in this area). (See Table 44)

As might be expected, older students are more likely to say they feel very prepared to confront sexual issues. This may be because older students are more likely to have peers who are having sex, are having sex themselves, or they may be developmentally more prepared to confront sexual situations. Older students are also more likely than younger students to have sex ed classes that cover a broader range of topics. The majority of students in 11th–12th grades (68%) say they feel very prepared to understand the basics of pregnancy and birth, compared to 38% of 7th–8th graders. Older students are also more likely to say they feel very prepared to deal with pressure to have sex (66% vs. 40%) and to know how to use condoms if they decided to have sex (71% vs. 33%).

Boys and girls generally rate themselves as similarly prepared except in three areas. Boys are more likely than girls to say they are very prepared to deal with the emotional issues and consequences of being sexually active (45% vs. 39%), and how to use condoms if they decided to have sex (62% vs. 48%). Interestingly, girls are more likely than boys to know that young people can buy condoms without parental permission, yet boys are more likely to say they would feel prepared in how to use them. Girls are more likely to say they are very prepared to wait to have sex until older or married (68% vs. 52%).

Students who have had sexual intercourse are more likely than those who have not, to rate themselves as prepared to confront all of these sexual issues, other than waiting to have sex until older or married.

### INFORMATION NEEDS

Students in 7–12th grade American public schools want more information about a wide variety of sexuality education topics. At the top of students' lists is wanting more information on what to do if they or a friend is raped or sexually assaulted (56%), followed closely by wanting more information on STDs other than HIV/AIDS (53%), and how to get tested for STDs and HIV/AIDS (53%). Regardless of gender or grade, these are the top three areas where students want more information. Overall, one out of four to more than half of students in every grade want more information on every topic. (See Table 45)

The issues that students are less likely to want more information on are homosexuality (26%) and how to use condoms (32%), yet still a significant proportion of students—more than one out of every four—does want more information on these areas.

For nearly every topic, younger students are more likely than older to say they want more information. One area where younger students are much more likely than older students to want more information is how to deal with the pressure to have sex (51% of 7th–8th grade students compared to 35% of 11th–12th grade students).

Boys and girls both want more information in every area, and girls are more likely to want more information than boys. In particular, girls are much more likely than boys to want more information on birth control (51% vs. 34%) what to do if they or a friend has been raped or sexually assaulted (65% vs. 48%), and how to deal with pressure to have sex (51% vs. 36%).

Students who have had sexual intercourse generally want as much information on sexuality education topics as those who have not. Since sexually active young people are at risk for contracting HIV/STDs or unintended pregnancy, this interest in more information may be a cause for concern—they are having sex but do not know the basics of safer sex; or a reason to applaud—they know that sexual situations can be confusing and want to find out more to stay safe. As many as one out of four students who have had sex want more information on the basics of reproduction (24%) and how to use condoms (28%), and almost half (46%) want more information on birth control and how to talk with a partner about birth control and STDs (46%).

**TABLE 44 STUDENTS: SENSE OF PREPAREDNESS BY GRADE, GENDER AND SEXUAL EXPERIENCE**

STUDENTS**

**76 QUESTIONNAIRE:  
PARENTS**

**88 QUESTIONNAIRE:  
TEACHERS**

**102 QUESTIONNAIRE:  
PRINCIPALS**

# QUESTIONNAIRE: STUDENTS

## STUDENTS

n=1,501 7th–12th grade students in public middle, junior and senior high schools

Margins of Error: plus or minus 3 percentage points

Dates of Interviewing: February 2 through May 23, 1999

Conducted by: Princeton Survey Research Associates

## METHODOLOGY

The Kaiser Family Foundation National Survey of Parents of Secondary School Students is a nationally-representative telephone survey of 1,501 7th–12th grade public school students. The questionnaire was designed by staff at the Kaiser Family Foundation and Princeton Survey Research Associates (PSRA). The interviews were conducted by telephone by PSRA between March 15 and May 13, 1999. The final response rate was 54 percent.

### 1. First, what grade are you in?

17% 7th  
 16% 8th  
 16% 9th  
 18% 10th  
 18% 11th  
 15% 12th  
 0% Don't know  
 0% Refused  
 n=1501

### 2. We are interested in knowing whether you have ever had sex education or family life classes or sessions in school. These are any classes or talks in school that discuss relationships, how babies are made, abstinence, AIDS, pregnancy prevention, and the like. These topics may have been taught in a separate sex education course, as part of another course, like health or science, or as independent lessons in the school auditorium or gym.

90% Yes  
 10% No  
 0% Don't know  
 0% Refused  
 n=1501

### 3. Will you be taking sex ed or family life later in this school year or not, or aren't you sure?

Based on those who have not had sex ed.

13% Yes  
 46% No  
 41% Don't know  
 0% Refused  
 n=168

**4. There are many reasons why some students have not had sex ed in school. Have you not had sex ed because sex ed wasn't offered in your school, because your parents did not give permission for you to take sex ed, because sex ed is offered but not for (INSERT CURRENT GRADE FROM QUESTION 1) graders, or is there some other reason?**

Based on those who have not had sex ed and will not have sex ed this school year.

- 53% No sex ed offered in school
  - 3% Parents didn't give permission
  - 15% Sex ed is offered, but not for current grade level of student
  - 1% Needed to choose between sex ed and another class
  - 10% Other
  - 18% Don't know
  - 0% Refused
- n=148

**5. For the next few questions, I'd like you to think only about the last time you had sex ed in school. What grade were you in the last time you had sex ed in school?**

Based on those who have had sex ed.

- 0% Kindergarten or younger
    - \* 1st
    - \* 2nd
    - \* 3rd
    - \* 4th
  - 4% 5th
  - 10% 6th
  - 17% 7th
  - 19% 8th
  - 24% 9th
  - 15% 10th
  - 5% 11th
  - 3% 12th
  - 2% Don't know
    - \* Refused
- n=1333

**6. Are you still taking sex ed right now?**

Based on those whose most recent sex ed is the same as their current grade.

- 25% Yes
  - 75% No
    - \* Don't know
  - 0% Refused
- n=411

**7. Would you say you are near the beginning, middle or end of sex ed?**

Based on those who are currently taking sex ed.

- 20% Beginning
  - 24% Middle
  - 53% End
  - 3% Don't know
  - 0% Refused
- n=106

**8. Before (INSERT GRADE OF MOST RECENT SEX ED FROM QUESTION 5 OR 8) grade, in which other grades, if any, did you have sex ed in school?**

Based on those who are currently at the beginning of sex ed. Multiple Responses Accepted, percentages may total more than 100%.

- 0% Kindergarten or younger
  - 0% 1st
  - 0% 2nd
  - 0% 3rd
  - 8% 4th
  - 30% 5th
  - 43% 6th
  - 17% 7th
  - 27% 8th
  - 13% 9th
  - 14% 10th
  - 0% 11th
  - 21% None
  - 0% Don't know
  - 0% Refused
- n=26

**9. How long was your (INSERT GRADE OF MOST RECENT SEX ED FROM QUESTION 5 OR 8) grade sex ed? Did it last for...?**

Based on those who have had sex ed in 7th–12th grade.<sup>1</sup> Multiple responses accepted, percentages may total more than 100%.

FIRST MENTION ONLY.

- 45% One class period or several class periods or special sessions
  - 29% Half a semester or quarter
  - 20% An entire semester or quarter
  - 3% A school year
  - 2% Other
  - 1% Don't know
  - 0% Refused
- n=1099

**10. Were boys and girls together in all sessions, or were there any sessions in which boys and girls were taught (INSERT GRADE OF MOST RECENT SEX ED FROM QUESTION 5 OR 8) grade sex ed separately?**

Based on those who have had sex ed in 7th–12th grade.

- 80% Boys and girls together for all sessions
  - 20% Taught separately for some sessions (or all sessions)
  - 1% Don't know
  - \* Refused
- n=1099

<sup>1</sup> Based on those who have had sex ed includes those who can remember the grade of their most recent sex ed and those who are currently taking sex ed and are at the middle or end of the class/course.

**11. Did your (INSERT GRADE OF MOST RECENT SEX ED FROM QUESTION 5 OR 8) grade sex ed include information about (INSERT STATEMENT)?****... What about (INSERT ITEM)?**

Based on those who have had sex ed in 7th–12th grade.

# QUESTIONNAIRE: PARENTS

## PARENTS

n=1,501 parents of middle, junior, or senior public high school students

Margins of Error: plus or minus 3 percentage points

Dates of Interviewing: February 2 through May 23, 1999

Conducted by: Princeton Survey Research Associates

## METHODOLOGY

The Kaiser Family Foundation National Survey of Parents of Secondary School Students is a nationally-representative telephone survey of 1,501 parents of 7th–12th grade public school students. The questionnaire was designed by staff at the Kaiser Family Foundation and Princeton Survey Research Associates (PSRA). The interviews were conducted by telephone by PSRA between March 15 and May 13, 1999. The final response rate was 54 percent.

- 1. First, how satisfied are you with the education your (INSERT CURRENT GRADE LEVEL) grade child is getting in school this year? Are you very satisfied, somewhat satisfied, somewhat dissatisfied or very dissatisfied with your child's education?**

39% Very satisfied  
 46% Somewhat satisfied  
 10% Somewhat dissatisfied  
 4% Very dissatisfied  
 2% Don't know  
 0% Refused  
 n=1501

THE FOLLOWING QUESTIONS ARE REGARDING YOUR [INSERT AGE] YEAR OLD [MALE/FEMALE] CHILD.

- 2. We are interested in knowing whether your child has ever had sex education or family life classes or sessions in school. These are any classes or talks in school that discuss relationships, how babies are made, abstinence, AIDS, pregnancy prevention, and the like. These topics may have been taught in a separate sex education course, as part of another course, like health or science, or as independent lessons in the school auditorium or gym.**

79% Yes  
 8% No  
 13% Don't know  
 0% Refused  
 n=1501

- 3. Will your child be taking sex education or family life later in this school year or not, or aren't you sure?**

Based on those whose child has not had sex ed.

12% Yes  
 49% No  
 39% Not sure  
 0% Refused  
 n=133

**4. There are many reasons why some children have not had sex education in school. Has your child not had sex education in school because it isn't offered by the school, because you didn't give your child permission to participate, because sex education is offered but not for (INSERT CURRENT GRADE OF CHILD) graders, or is there some other reason?**

Based on those whose child has not had and will not have sex ed this school year.

- 44% No sex education offered by school
- 8% Parents didn't give permission
- 21% Sex education is offered but not at child's grade level
- 2% Need to choose between sex education and another class (VOLUNTEERED)
- 2% Other
- 23% Don't know
- 0% Refused
- n=117

**5. What was the main reason you decided not to have your child participate in sex education? Was it because you don't think schools should teach sex education, because you don't agree with the content of the material being taught, because you thought your child was too young to be taught the material, or is there some other reason?**

Based on those who did not give permission for their child to take sex ed.

- 15% Don't think schools should teach
- 43% Didn't agree with the content
- 21% Thought child was too young
- 21% Other
- 0% Don't know
- 0% Refused
- n=10

**6. For the next few questions, I'd like for you to think only about the MOST RECENT sex education your child had in school. What grade was your child in for (his/her) most recent sex education?**

Based on those whose child has had sex ed.

- 0% Kindergarten or younger
- \* 1st
- 0% 2nd
- \* 3rd

**7. Is your (INSERT CURRENT GRADE OF CHILD) child still taking sex education right now?**

Based on those whose child's most recent sex ed is the same as their current grade.

- 30% Yes
- 57% No
- 13% Not sure/Don't know
- 0% Refused
- n=400

**8. Would you say (he/she) is near the beginning, middle or end of sex education?**

Based on those whose child is currently taking sex ed.

- 16% Beginning
- 25% Middle
- 51% End
- 8% Don't know
- 0% Refused
- n=115

**9. Before (INSERT GRADE OF MOST RECENT SEX) grade sex education, in which other grades, if any, did your child have sex education in school?**

Based on those whose child is currently at the beginning of sex ed. Multiple responses accepted, percentages may total more than 100%.

- 0% Kindergarten or younger
- 0% 1st
- 0% 2nd
- 0% 3rd
- 0% 4th
- 5% 5th
- 24% 6th

- 19% 8th
- 0% 9th
- 0% 10th
- 0% 11th
- 32% None
- 20% Don't know
- 0% Refused
- n=27

**10. Did the school send you a description of the (INSERT MOST RECENT GRADE OF SEX ED FROM QUESTION 6 OR 9) grade sex education curriculum telling you what topics would be covered?**

Based on those whose child has had sex ed in 7th–12th grade.<sup>2</sup>

- 49% Yes
- 45% No
- 7% Don't know
- 0% Refused
- n=861

**11. Some schools offer a session for parents in which they describe the sex education curriculum and answer parents' questions. Did your child's school offer such a session?**

Based on those whose child has had sex ed in 7th–12th grade.

- 29% Yes
- 61% No
- 10% Don't know
- 0% Refused
- n=861

**12. Did you or another adult family member attend the session, or not?**

Based on those who said the school offered a session for parents.

- 27% Yes
- 73% No
- \* Don't know
- 0% Refused
- n=247

<sup>2</sup> Based on those whose child has had sex ed includes parents who can remember the grade of their child's most recent sex ed and those whose child is taking sex ed and at the middle or end of the class/course.

**13. I'd like to ask you about some of the topics that may have been covered in your child's (INSERT GRADE OF MOST RECENT SEX ED FROM QUESTION 6 OR 9) grade sex education. For each topic please tell me whether or not it was covered. Just let me know if you aren't sure or can't remember. Did your child's (INSERT GRADE OF MOST RECENT SEX ED FROM QUESTION 6 OR 9) grade sex education include information about (INSERT STATEMENT)? How about...(INSERT STATEMENT)?**

Based on those whose child has had sex ed in 7th–12th grade.

# QUESTIONNAIRE: TEACHERS

## TEACHERS

n=1,001 teachers of middle, junior, or senior public high schools

Margins of Error: plus or minus 3 percentage points

Dates of Interviewing: March 15 through May 13, 1999

Conducted by: Princeton Survey Research Associates

## METHODOLOGY

The Kaiser Family Foundation National Survey of Public Secondary School Teachers of Sex Education is a nationally-representative telephone survey of 1,001 teachers of sex education in public middle, junior, and senior high schools. The questionnaire was designed by staff at the Kaiser Family Foundation and Princeton Survey Research Associates (PSRA). The interviews were conducted by telephone by PSRA between March 15 and May 13, 1999. The final response rate was 72 percent.

### 1. Which of the following best describes the MAIN subject you teach?

- 56% Health
  - 14% Physical education
  - 10% Biological and/or physical sciences
  - 11% Home economics and/or family and consumer science
  - 5% Sex education
  - 2% Social studies
    - \* History
    - \* Math
    - \* English
    - \* Driver's education
  - 1% Other
  - 0% Don't know
  - 0% Refused
- n=1000

### 2. In the last 2 school years, what subjects have you taught?

Multiple responses accepted, percentages may total more than 100%.

- 76% Health
  - 39% Physical education
  - 15% Biological and/or physical sciences
  - 14% Home economics and/or family and consumer science
  - 12% Sex education
  - 4% Social studies
  - 2% Math
  - 2% Driver's education
  - 2% English
  - 1% History
  - 10% Other
  - 1% Don't know
    - \* Refused
- n=1000

- 3. Have you taught sex education or family life at least once in the last 2 school years? These are any classes or talks in school that discuss relationships, how babies are made, abstinence, AIDS, pregnancy prevention, and the like. These topics may have been taught in a separate sex education course, as part of another course, like health or science, or as independent lessons in the school auditorium or gym.**

Based on those who do not mention teaching sex ed in last 2 years.

100% Yes  
 0% No (TERMINATED)  
 0% Don't know (TERMINATED)  
 0% Refused (TERMINATED)  
 n=877

- 4. What grade or grades did you teach the last time you taught sex ed?**

Multiple responses accepted, percentages may total more than 100%.

\* Kindergarten or younger  
 1% 1st  
 \* 2nd  
 0% 3rd  
 \* 4th  
 1% 5th  
 7% 6th  
 28% 7th  
 33% 8th  
 38% 9th  
 35% 10th  
 27% 11th  
 26% 12th  
 0% Don't know  
 0% Refused  
 n=1000

- 5. Thinking about just the last 2 school years, approximately what percentage of your classroom teaching time was spent teaching sex ed? Did you spend 100% of your classroom time teaching sex ed, more than 50%, between 50% and 25%, between 24% and 10% or less than 10% of your classroom time teaching sex ed?**

3% 100%  
 4% More than 50%  
 22% Between 50% and 25%  
 41% Between 24% and 10%

THE NEXT FEW QUESTIONS HAVE TO DO WITH WHAT WAS MAINLY TAUGHT IN THE CURRICULUM YOU PRESENTED TO (INSERT GRADE OF MOST RECENT SEX ED) GRADERS. I'M INTERESTED IN WHAT WAS MAINLY TAUGHT, RATHER THAN YOUR OWN FEELINGS OR OPINIONS ABOUT THESE ISSUES.

**18. Which of these best describes what you mainly taught to (INSERT GRADE OF MOST RECENT SEX ED TAUGHT FROM QUESTION 4) graders?**

**You can answer just by saying A or B.**

- 33% A) Young people should ONLY have sex when they are married
  - 61% B) Young people should wait to have sex, but if they DON'T they should use birth control and practice safer sex
  - 1% Topic covered, but no message about when to have sex (VOLUNTEERED)
  - 2% Topic not discussed at all in sex ed (VOLUNTEERED)
  - 2% Other
    - \* Don't know
    - \* Refused
- n=1000

**19. A. Which one of these statements best describes what you mainly taught to**

**(INSERT GRADE OF MOST RECENT SEX ED TAUGHT FROM QUESTION 4) graders...that...**

- 9% A) Abortion is immoral or wrong
  - 57% B) Abortion is a personal matter
  - 6% Topic discussed, but no message about abortion (VOLUNTEERED)
  - 26% Topic not discussed at all in sex ed (VOLUNTEERED)
  - 1% Other
  - 1% Don't know
    - \* Refused
- n=1000

**B. (Which one of these statements best describes what you mainly taught to**

**(INSERT GRADE OF MOST RECENT SEX ED TAUGHT FROM QUESTION 4) graders?)...How about...**

- 5% A) Masturbation is immoral or wrong
  - 56% B) Masturbation is a normal behavior
  - 5% Topic discussed, but no message about masturbation (VOLUNTEERED)
  - 33% Topic not discussed at all in sex ed (VOLUNTEERED)
  - \* Other
  - 1% Don't know
    - \* Refused
- n=1000

**C. (Which one of these statements best describes what you mainly taught to**

**(INSERT GRADE OF MOST RECENT SEX ED TAUGHT FROM QUESTION 4) graders?)...How about...**

- 5% A) Homosexuality is immoral or wrong
  - 59% B) Some people are homosexual and should not be discriminated against
  - 5% Topic discussed, but no message about homosexuality (VOLUNTEERED)
  - 29% Topic not discussed at all in sex ed (VOLUNTEERED)
  - 1% Other
  - 1% Don't know
    - \* Refused
- n=1000

**20. I have one last question about what you mainly taught to (INSERT GRADE OF MOST RECENT SEX ED TAUGHT FROM QUESTION 4) graders.**

**Did you mainly teach that...?**

- 5% A) Sex is something to avoid and fear, OR
  - 90% B) Sex is a healthy and normal part of life
  - 1% Topic discussed, but no message about sex (VOLUNTEERED)
  - 3% Topic not discussed at all in sex ed (VOLUNTEERED)
  - 1% Other
    - \* Don't know
    - \* Refused
- n=1000

**21. Thinking about the organization of your (INSERT GRADE OF MOST RECENT SEX ED TAUGHT FROM QUESTION 4) grade sex ed class, was it primarily a lecture with some discussion or primarily student participation in discussions, role plays, projects and other activities?**

- 22% Primarily a lecture with some discussion
- 55% Primarily student participation
- 22% Combination of student participation and lectures (VOLUNTEERED)
- \* Don't know
- 0% Refused
- n=1000

**22. Did you primarily use a standard set of materials provided by your school district to teach sex ed or did you primarily choose your own materials?**

- 54% Standard/provided by school district
- 44% Own materials
- 2% Don't know
- \* Refused
- n=1000

**23. How strictly were you required to follow your school's curriculum for (INSERT GRADE OF MOST RECENT SEX ED TAUGHT FROM QUESTION 4) grade sex ed? Could you teach pretty much what you wanted, did you have to follow some guidelines or did you have to follow very strict guidelines about what you could teach?**

- 23% Teach pretty much what wanted
- 48% Some guidelines
- 29% Strict guidelines
- 1% Don't know
- 0% Refused
- n=1000

**24. With A meaning excellent and F meaning very poor, what grade would you give the sex ed curriculum you taught to (INSERT GRADE OF MOST RECENT SEX ED) graders in terms of how well it prepared students to (INSERT STATEMENT)?**

	<b>A Exc.</b>	<b>B Good</b>	<b>C Avg.</b>	<b>D Poor</b>	<b>F Very Poor</b>	<b>Didn't Teach (VOL.)</b>	<b>Don't Know</b>	<b>Ref.</b>
a. understand the basics of how babies are made, pregnancy and birth	39%	38%	15%	3%	1%	4%	1%	*
b. wait to have sex until older or married	52	29	11	2	1	2	1	0
c. deal with the emotional issues and consequences of being sexually active	37	34	17	5	1	4	1	0
d. deal with the pressure to have sex	42	35	15	3	1	3	1	0
e. talk with a (girlfriend /boyfriend) or partner about birth control and STDs	29	33	17	7	4	9	1	*
f. talk with their parents about sex and relationship issues	23	33	23	8	5	7	1	0
g. know how to use condoms, if they decided to have sex	22	19	14	9	14	21	1	*

# QUESTIONNAIRE: PRINCIPALS

## PRINCIPALS

n=313 principals of middle, junior, or senior public high schools

Margins of Error: Plus or minus 6 percentage points

Dates of interviewing: March 15–May 13, 1999

Conducted by: Princeton Survey Research Associates

## METHODOLOGY

The Kaiser Family Foundation National Survey of Public Secondary School Principals is a nationally-representative telephone survey of 313 principals of middle, junior, and senior public high schools. The questionnaire was designed by staff at the Kaiser Family Foundation and Princeton Survey Research Associates (PSRA). The interviews were conducted by telephone by PSRA between March 15 and May 13, 1999. The final response rate was 41 percent.

### 1. How many years have you been a principal?

- 37% 1–5 years
- 42% 6–15 years
- 11% 16–20 years
- 10% more than 20 years
- \* Don't know
- 0% Refused
- n=313

### 2. And, for how many years have you been a principal at your current school?

- 61% 1–5 years
- 33% 6–15 years
- 6% 16 or more
- 0% Don't know
- 0% Refused
- n=313

### 3. What grades does your school teach?

Multiple responses accepted, percentages may total more than 100%.

- 1% Kindergarten or younger
- 3% 1st
- 2% 2nd
- 2% 3rd
- 2% 4th
- 5% 5th
- 35% 6th
- 52% 7th
- 52% 8th
- 56% 9th
- 56% 10th
- 55% 11th
- 54% 12th
- 0% Don't know
- 0% Refused
- n=313

**4. Has sex education or family life been taught in your school during the last two school years? These are any classes or talks in school that discuss relationships, how babies are made, abstinence, AIDS, pregnancy prevention, and the like. These topics may have been taught in a separate sex education course, as part of another course, like health or science, or as independent lessons in the school auditorium or gym.**

- 95% Yes
- 5% No
- 0% Don't know
- 0% Refused
- n=313

**5. Which of the following best describes why your school has not taught sex ed in the last two years?**

Based on those who said sex ed had not been taught in the last two school years.

- 30% Sex ed is taught in grade levels covered by another school in our district
- 10% Teaching sex ed creates too much controversy in our community
- 10% There just isn't enough time or resources to teach sex ed
- 6% Teaching sex ed is prohibited by local government officials or school administrators
- 45% Some other reason
- 0% Don't know
- 0% Refused
- n=13

**6. Was sex ed taught in your school (INSERT STATEMENT)?**

	Yes	No	Don't Know	Ref.
a. this school year	97%	3%	1%	0%
b. last school year	97%	2%	1%	0%

n=300<sup>3</sup>

**7. Will your school teach sex ed later in this school year, or not?**

Based on those who said sex ed was not taught this year.

- 80% Yes
- 20% No
- 0% Don't know
- 0% Refused
- n=10

**8. Thinking about the last 2 school years, what grade levels were taught sex ed in your school?**

Multiple responses accepted, percentages may total more than 100%.

- \* Kindergarten or younger
- 2% 1st
- 0% 2nd
- 0% 3rd
- 1% 4th
- 2% 5th
- 21% 6th
- 40% 7th
- 42% 8th
- 42% 9th
- 40% 10th
- 25% 11th
- 23% 12th
- 3% All grades (VOLUNTEERED)
- 0% Don't know
- 0% Refused
- n=300

<sup>3</sup> From question 6 on, only principals of schools that taught sex ed in the last 2 years are included. Principals of schools that did not teach sex ed skipped to questions D2 and D3.

**9. In what grade level is the MAIN sex ed instruction taught in your school?**

- 0% Kindergarten or younger
  - 0% 1st
  - 0% 2nd
  - 0% 3rd
  - 0% 4th
  - 0% 5th
  - 2% 6th
  - 9% 7th
  - 22% 8th
  - 21% 9th
  - 19% 10th
  - 3% 11th
  - 4% 12th
  - 18% No MAIN grade level/all grades taught equally
  - \* Don't know
  - 0% Refused
- n=300

**10. Thinking only about the sex ed your school taught to (INSERT ALL GRADES 7–12 FROM QUESTION 8) graders, which grade was taught most recently?**

Based on those who said the main grade of instruction is 0–6 or that there is no main grade and sex ed is taught in more than one grade 7–12.

- 5% 7th
  - 34% 8th
  - 6% 9th
  - 10% 10th
  - 4% 11th
  - 8% 12th
  - 28% Don't know
  - 4% Refused
- n=50

**11. Are students required to take sex ed or is sex ed optional?**

- 52% Required
  - 47% Optional
  - 1% Don't know
  - 0% Refused
- n=300

**12. In your school, how is sex ed usually taught? As a separate sex ed course, as part of another course, or as specific lessons taught independent of any other course.**

- 2% As a separate sex ed course
  - 91% As part of another course
  - 6% As specific lessons taught independent of any other course
  - \* Don't know
  - 0% Refused
- n=300

**13. In your school, are boys and girls together in all sessions or are there any sessions in which boys and girls are taught separately?**

- 65% Boys and girls taught together for all sessions
  - 21% Boys and girls taught separately for some sessions
  - 13% Both ways (VOLUNTEERED)
  - 1% Don't know
  - 0% Refused
- n=300

**14. How long does (INSERT MAIN INSTRUCTION GRADE/RANDOM GRADE) grade sex ed typically last in your school? Does it last for...?**

FIRST RESPONSE ONLY.

- 70% One class period or several class periods or special sessions
  - 14% Half a semester or quarter
  - 11% An entire semester or quarter
  - 2% A school year
  - 3% Other
  - 1% Don't know
  - 0% Refused
- n=300

**15. Which of the following best describes your school's policy about sex ed?**

- 25% Parents have to give permission for their child to take sex ed
  - 53% Parents are notified of sex ed, but don't have to sign a permission slip
  - 22% Parents are NOT notified and do NOT have to sign a permission slip
  - 1% Don't know
  - 0% Refused
- n=300

**16. Last year, roughly what percentage of parents, if any, did not allow their children to take sex ed either by not giving permission or taking them out of sex ed?**

- 67% 0
  - 13% 1
  - 7% 2
  - 7% 3-5
  - 3% more than 5
  - 3% Don't know
  - 1% Refused
- n=300

**17. In which of the following ways does your school try to involve parents in their children's sex ed experience? Does your school (INSERT STATEMENT)?**

	Yes	No	Don't Know	Ref.
a. invite parents to attend orientation sessions about sex ed	39%	59%	1%	0%
b. invite parents to attend classes that teach them about sexuality and sexual health issues	38	61	1	0
c. send materials home to parents about sex ed or involve parents in parent/child homework	58	38	4	0

n=300

**18. Now I'd like to ask you about the sex ed curriculum taught to (INSERT MAIN INSTRUCTION GRADE/RANDOM GRADE) graders in your school. Is (INSERT STATEMENT) included in your school's sex ed curriculum for (INSERT MAIN INSTRUCTION GRADE/RANDOM GRADE) graders? What about...(INSERT STATEMENT)?**

	Yes	No	Don't Know	Ref.
a. the basics of how babies are made, pregnancy and birth	90%	6%	4%	0%
b. birth control, that is methods of preventing pregnancy	73	20	6	*
c. HIV/AIDS	97	2	1	0
d. sexually transmitted diseases other than HIV/AIDS, such as herpes	96	2	2	0
e. how to deal with the emotional issues and consequences of being sexually active	80	14	6	0
f. waiting to have sex until are older or married	94	3	3	0
g. how to deal with pressure to have sex	94	3	2	0
h. how to talk with a girlfriend/ boyfriend or partner about birth control and sexually transmitted diseases, that is STDs	54	32	14	0
i. how to talk with parents about sex and relationship issues	70	18	12	0
j. how to use condoms	39	51	10	*
k. how to use and where to get other birth control	45	44	11	0
l. how to get tested for HIV/AIDS and other sexually transmitted diseases, that is STDs	73	14	14	0
m. abortion	37	48	15	0
n. homosexuality and sexual orientation, that is being gay, lesbian or bisexual	36	50	14	0
o. what to do if they or a friend has been raped or sexually assaulted	73	16	10	0

n=300

**19. There are many reasons for not covering a particular topic. What is the MAIN reason your school didn't teach (INSERT STATEMENT) in (INSERT MAIN INSTRUCTION GRADE/RANDOM GRADE) sex ed?**

**a. the basics of how babies are made, pregnancy and birth**

Based on those who said pregnancy and birth were not included in curriculum.

- 14% Because your sex ed teachers felt pressured not to teach it by the community and parents
  - 23% Because it is school or district policy not to teach it
  - 4% Because there wasn't enough time in the curriculum
  - 6% Because the topic was covered in an earlier grade
  - 14% Because the topic will be covered in a later grade
  - 0% Not part of the curriculum
  - 0% Never came up
  - 0% Abstinence class/abstinence based only
  - 14% Some other reason
  - 17% Don't know
  - 6% Refused
- n=18

**b. birth control**

Based on those who said birth control was not included in the curriculum.

- 10% Because your sex ed teachers felt pressured not to teach it by the community and parents
  - 55% Because it is school or district policy not to teach it
  - 7% Because there wasn't enough time in the curriculum
  - 0% Because the topic was covered in an earlier grade
  - 15% Because the topic will be covered in a later grade
  - 6% Not part of the curriculum
  - 0% Never came up
  - 2% Abstinence class/abstinence based only
  - 3% Some other reason
  - 2% Don't know
  - 0% Refused
- n=61

**c. HIV/AIDS**

Based on those who said HIV/AIDS was not included in the curriculum.

- 0% Because your sex ed teachers felt pressured not to teach it by the community and parents
  - 49% Because it is school or district policy not to teach it
  - 0% Because there wasn't enough time in the curriculum
  - 14% Because the topic was covered in an earlier grade
  - 0% Because the topic will be covered in a later grade
  - 18% Not part of the curriculum
  - 0% Never came up
  - 0% Abstinence class/abstinence based only
  - 0% Some other reason
  - 20% Don't know
  - 0% Refused
- n=7

**d. sexually transmitted diseases other than HIV/AIDS**

Based on those who said STDs were not included in the curriculum.

- 0% Because your sex ed teachers felt pressured not to teach it by the community and parents
  - 65% Because it is school or district policy not to teach it
  - 0% Because there wasn't enough time in the curriculum
  - 12% Because the topic was covered in an earlier grade
  - 15% Because the topic will be covered in a later grade
  - 0% Not part of the curriculum
  - 0% Never came up
  - 0% Abstinence class/abstinence based only
  - 0% Some other reason
  - 9% Don't know
  - 0% Refused
- n=7

**e. how to deal with the emotional issues and consequences of being sexually active**

Based on those who said the emotional issues and consequences of being sexually active were not included in the curriculum.

- 13% Because your sex ed teachers felt pressured not to teach it by the community and parents
  - 27% Because it is school or district policy not to teach it
  - 15% Because there wasn't enough time in the curriculum
  - 2% Because the topic was covered in an earlier grade
  - 6% Because the topic will be covered in a later grade
  - 11% Not part of the curriculum
  - 0% Never came up
  - 0% Abstinence class/abstinence based only
  - 16% Some other reason
  - 10% Don't know
  - 0% Refused
- n=41

**f. waiting to have sex until older or married**

Based on those who said waiting to have sex until older or married was not included in the curriculum.

- 0% Because your sex ed teachers felt pressured not to teach it by the community and parents
  - 60% Because it is school or district policy not to teach it
  - 7% Because there wasn't enough time in the curriculum
  - 0% Because the topic was covered in an earlier grade
  - 7% Because the topic will be covered in a later grade
  - 19% Not part of the curriculum

f. were politicians, such as the governor or your local city council	6	14	19	55	5	0
g. were other community members	15	36	16	30	3	*

n=300

**37. Over the last couple of years, have there been discussions or debate in the PTA, school board, or at any public meetings about (INSERT STATEMENT)?...How about (INSERT STATEMENT)?**

	Yes	No	Don't Know	Ref.
a. whether or not to teach sex ed at all	17%	80%	2%	0%
b. what topics to teach in sex ed, such as birth control or sexual orientation	26	73	2	0
c. teaching abstinence-only	31	66	4	0
d. whether sex ed classes should be single-sex or coed	16	80	4	0
e. how parents give permission for their children to take or be taken out of sex ed	26	70	4	1

n=300

**38. Would you describe these discussions as very calm, somewhat calm, somewhat heated or very heated?**

Based on those who said any of the topics in QUESTION 37 have been a topic of discussion/debate.

- 39% Very calm
  - 37% Somewhat calm
  - 13% Somewhat heated
  - 2% Very heated
  - 7% Don't know
  - 2% Refused
- n=139

**39. Did these discussions result in any changes in the sex ed curriculum?**

- 34% Yes
  - 58% No
  - 6% Don't know
  - 2% Refused
- n=139

**40. What were the changes?**

Based on those who said discussions resulted in change. Multiple responses accepted, percentages may total more than 100%.

- 19% Topics once taught are now not taught
  - 17% Topics once not taught are now being taught
  - 14% Other information was taught before and now only abstinence is taught
  - 12% Abstinence-only was taught before, but now other information is taught as well
  - 8% Exploring single-gender versus co-ed classes
  - 7% Curriculum was revised/modified
  - 6% More time is devoted to sex ed than before
  - 4% Sex ed is now being taught in the schools
  - 1% Students get sex ed in an earlier grade level than before
  - 1% Students get sex ed in a later grade level than before
  - 0% Sex ed is no longer taught in the schools
  - 0% Less time is devoted to sex ed than before
  - 12% Other
  - 14% Don't know
  - 0% Refused
- n=48

**41. Generally, how supportive are (INSERT STATEMENT) of your school's sex ed program? Would you say they are very supportive, somewhat supportive, not too supportive or not supportive at all.**

	Very	Some- what	Not Too	Not At All	Don't Know	Ref.
a. parents	58%	36%	1%	*	5%	0%
b. the school board or school administrators	72	23	1	0	4	0
