The Public's Views on the Response to Hurricane Katrina

August 2006

Methodology

The Kaiser Family Foundation *Health Poll Report Survey* was conducted and analyzed by researchers at the Kaiser Family Foundation. A nationally representative sample of 1,217 adults ages 18 and older was contacted by telephone by Princeton Survey Research Associates International between June 12 and June 19, 2006. Interviews were conducted in English and Spanish.

The margin of sampling error for the survey is plus or minus 3 percentage points for total respondents. For results based on smaller subsets of respondents the margin of sampling error is higher. Note that sampling error is only one of many potential sources of error in this or any other public opinion poll.

Values less than 0.5% are indicated by an asterisk (*). “VOL” indicates that a response was volunteered by respondent, not an explicitly offered choice.
