THE KAISER COMMISSION ON
Medicaid and the Uninsured

Acknowledgements

We thank the Medicaid directors and other human services agency directors and their staffs in all 50 states and the District of Columbia. This report could not have been prepared without their cooperation and support. We appreciate, in particular, those who provided data for this study and who responded to numerous follow-up questions relating to monthly Medicaid enrollment reports.

We acknowledge and thank Dr. Vernon Smith of Health Management Associates for his assistance in obtaining the data from the states and his advice on this report. We also thank Barbara Lyons, Deputy Director of the Kaiser Commission on Medicaid and the Uninsured, whose counsel and guidance has been invaluable throughout the process of developing and finalizing these reports.

Appendix F : Methodology – Eligibility Categories.....	F-1

Executive Summary

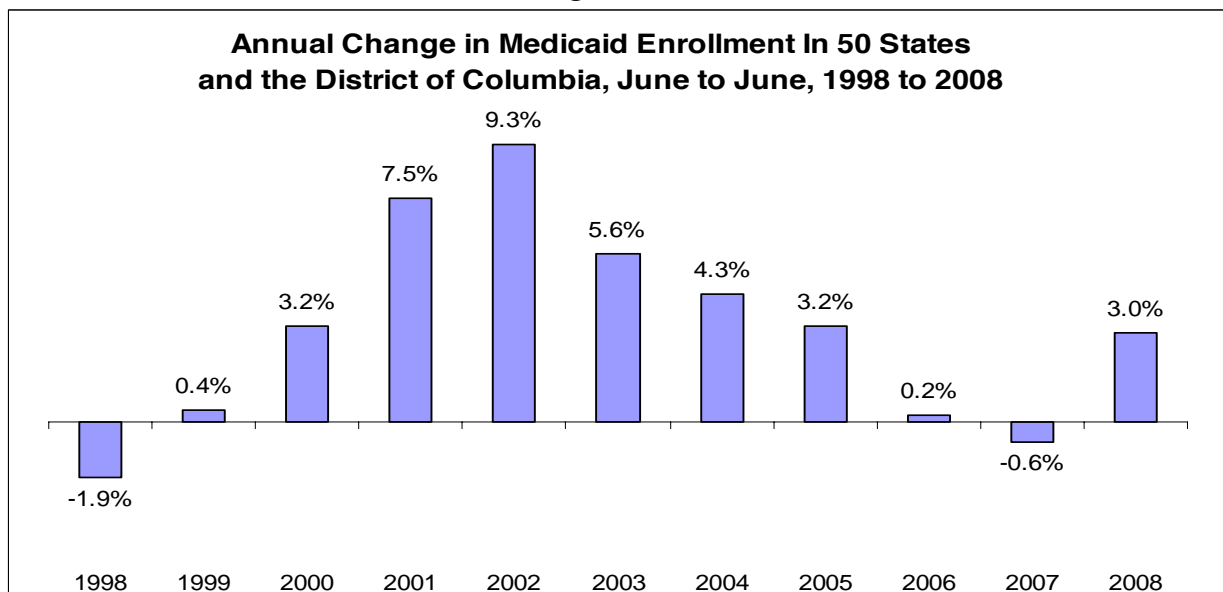

In June of 2008 – barely six months into the beginning of the current recession – Medicaid programs enrolled 43.5 million individuals in the 50 states and the District of Columbia, a 3.0% increase from the previous June (Figures ES-1 and ES-2).¹ This increase represented a major reversal from the 0.6% decline from June of 2006 to 2007, which had marked the first national decline in Medicaid enrollment after seven consecutive years of growth (Figure ES-2).

Medicaid directors indicated that the declining economy was a primary cause of increased Medicaid enrollment from June 2007 to June 2008. In some states enrollment was also affected by specific policy actions designed to expand Medicaid enrollment – frequently in response to concerns about the growing number of uninsured individuals.² The Medicaid enrollment growth was greatest in the second six-month interval in this one-year period. An increase of 1.0% from June 2007 to December 2007 was followed by a more significant 2.0% increase from December 2007 to June 2008 (Figure ES-3).

Figure ES-3

In 2006 and early 2007 enrollment trends were affected by improving economic conditions and also by the citizenship documentation requirements of the Deficit Reduction Act of 2005 (DRA) which were effective as of July 1, 2006. When state officials were surveyed in the summer of 2007, thirty-seven Medicaid directors indicated that these new requirements contributed to slower growth or declining Medicaid enrollment in their state, at least on a temporary basis.³

In previous Medicaid enrollment reports we noted that children were affected more than adults by the enrollment reduction that occurred in the second half of 2006.⁴ Subsequently the enrollment of children increased at about the same rate as the enrollment of adults (including parents, pregnant women, and aged and disabled individuals). As a result, enrollment of adults in Medicaid rose by 2.9% from June 2008 to June 2006 while enrollment of children increased by only 1.8% percent over that same period.

Enrollment of aged and disabled individuals in Medicaid increased by 2.5%, from June 2007 to June 2008 according to data from the 46 states that could separate out this group. During this period, enrollment of families, children and pregnant women increased by 3.2% in these same 46 states. Because economic conditions and Medicaid eligibility policies differ significantly among the states, some states were expanding coverage, while a few restricted eligibility standards or enrollment processes. As national Medicaid enrollment rose by 3.0% from June 2007 to June 2008, individual state enrollment ranged from a 3% decline to an 11% increase.

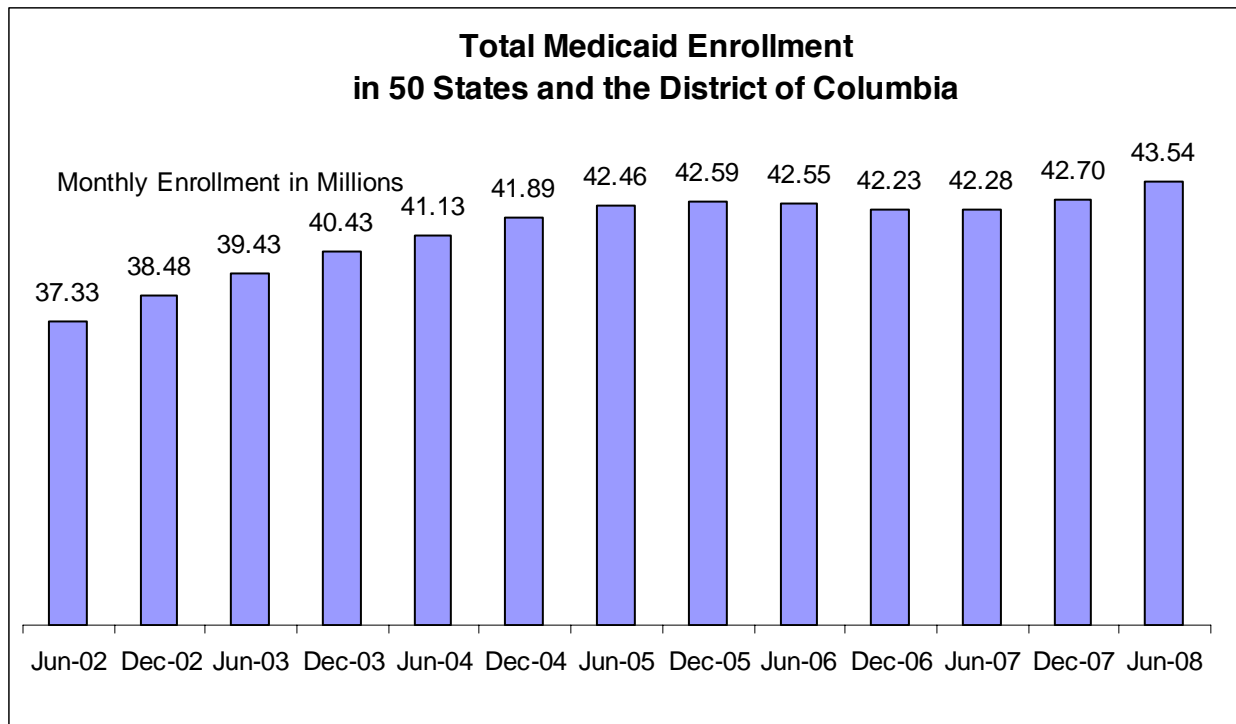

Future reports in this series will likely show continued national Medicaid enrollment growth. As the recession deepened, unemployment rose from 5.6% in June of 2008 to 9.4% in July of 2009, leading to a projected rise both in the uninsured and in the number of individuals eligible for and enrolled in state Medicaid programs.⁵

Total Medicaid Enrollment in the 50 States and D.C.

All 50 states and the District of Columbia provided data on the total number of individuals enrolled in their Medicaid programs for each June and December from June 1997 to June 2008. These data show that after declining from June 1997 to December 1998, total enrollment increased for seven consecutive years, reaching 42.59 million in December 2005. It then declined slightly during 2006.

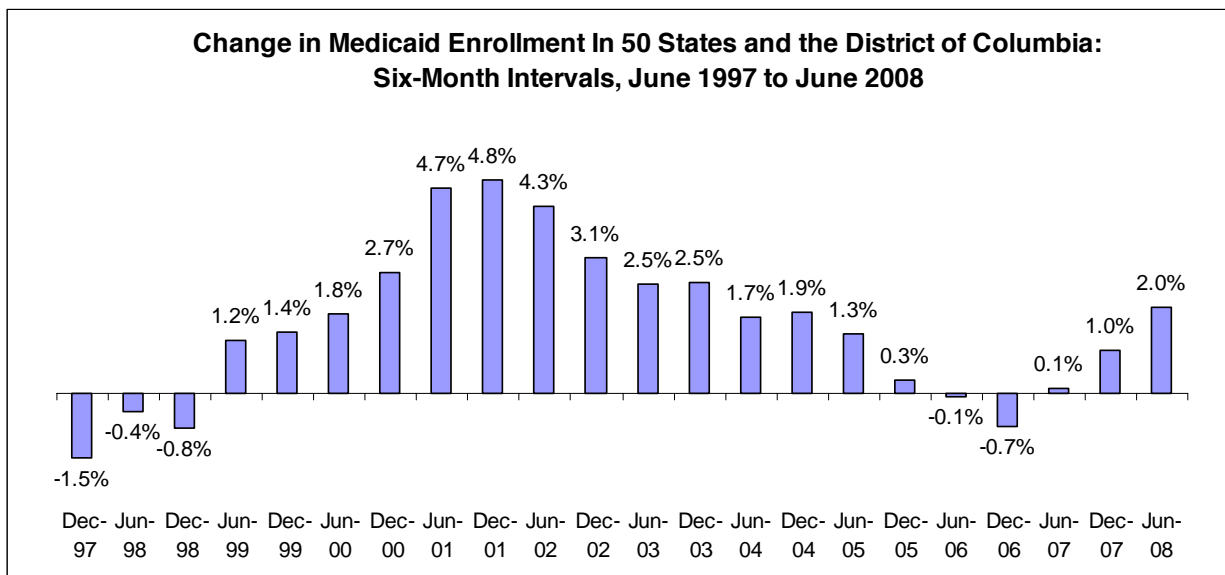

Subsequent to December 2006 Medicaid enrollment has increased in each six-month interval and has grown at an increasing rate. The enrollment of 43.54 million individuals in Medicaid in June 2008 represents an all-time high for Medicaid enrollment. (See Figures 1, 2, and 3).

Variations in Medicaid Enrollment by State⁶

While national Medicaid enrollment increased by 3% from June 2007 to June 2008, enrollment growth varied widely from state to state (Table 1b and Figure 4). Forty-four states experienced enrollment increases, while only seven had decreases in enrollment. In separate studies by the Kaiser Commission on Medicaid and the Uninsured and Health Management Associates, each of these states reported the factors that contributed to enrollment changes in their states during this time period.⁷

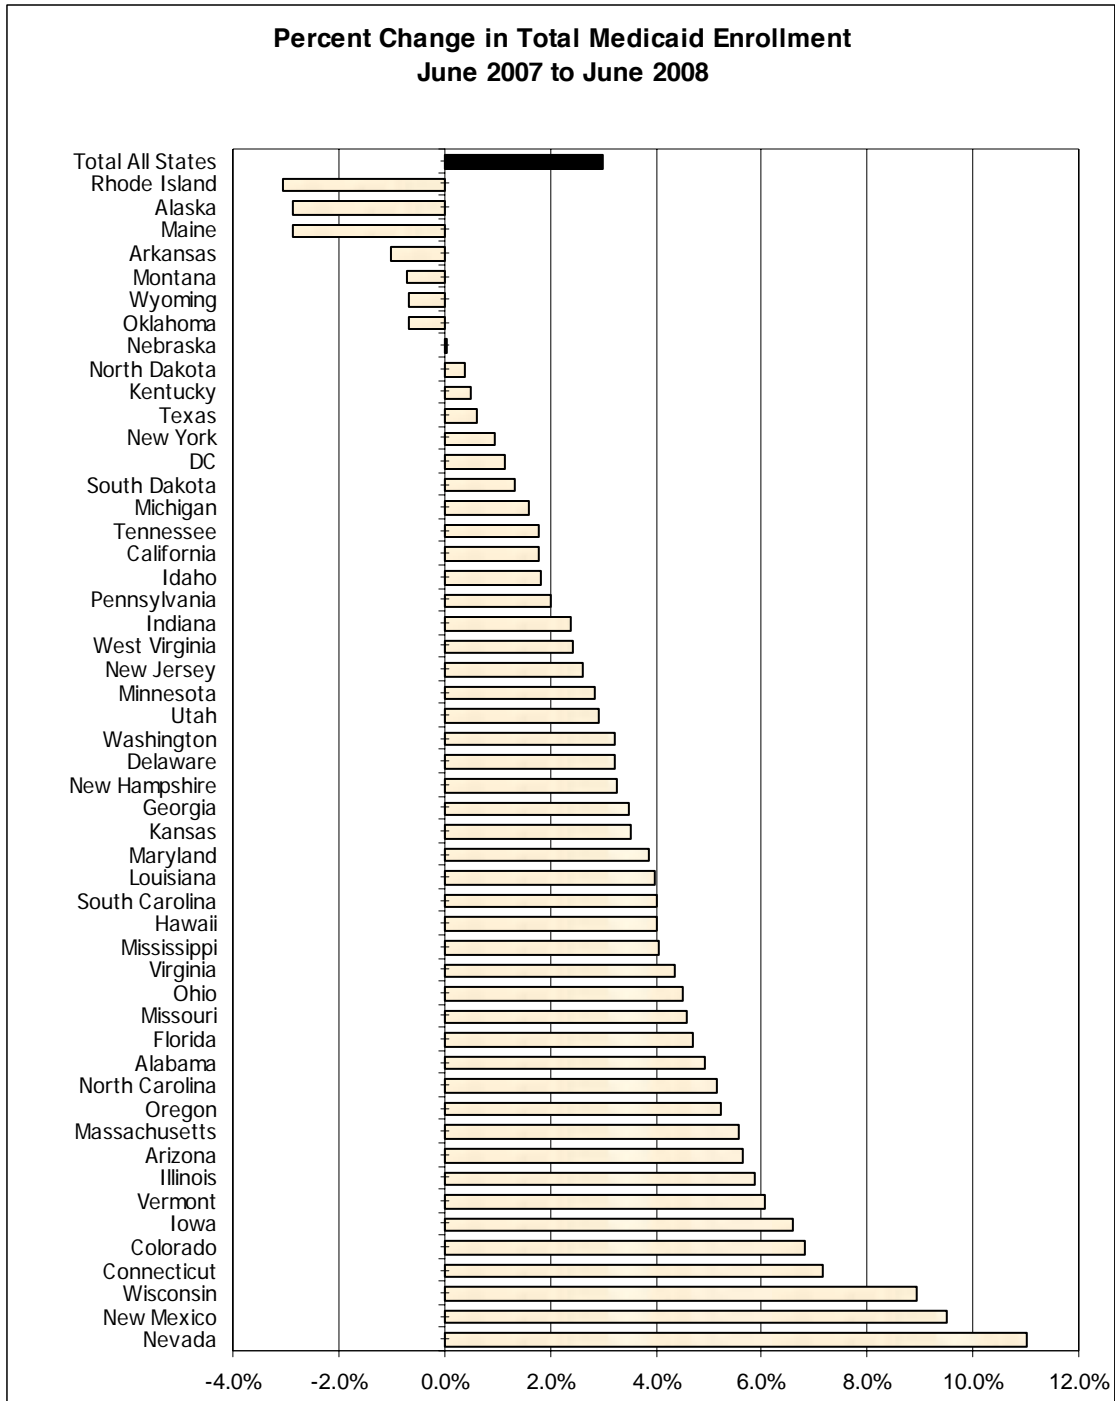

States with Enrollment Decreases: Three states, Alaska, Maine and Rhode Island, had enrollment decreases of approximately 3% from June 2007 to June 2008.

- The **Alaska** enrollment decline occurred primarily from June to December 2007 and affected children more than adults. Alaska officials indicated that the decline in Medicaid enrollment was attributed to the DRA citizenship and identity documentation requirements. Enrollment increased from December 2007 to June 2008, and Alaska officials expect this caseload increase to continue in their 2009 fiscal year (July 2008 to June 2009).
- The enrollment reduction in **Maine** was strictly related to constriction of that state's childless adult Medicaid waiver.
- **Rhode Island** officials indicated that positive changes in their state's economy and the DRA citizenship and identity documentation requirements were the forces leading to lower Medicaid enrollment in their 2007 and 2008 fiscal years. The enrollment decline affected children more than adults. The officials expect enrollment to be flat in state fiscal year 2009 (July 2008 to June 2009).

States with Enrollment Increases: Three states, Nevada, New Mexico and Wisconsin, experienced enrollment growth that exceeded 8% from June 2007 to June 2008.

- **Nevada** had an enrollment increase of 11.0%. Nevada officials attribute their Medicaid enrollment increase to rising unemployment and also to community outreach efforts to inform individuals about Medicaid eligibility.
- **New Mexico** had an enrollment increase of 9.5%. Within this total, enrollment of non-disabled children increased by 12.8%. New Mexico officials indicate that the enrollment increase was partly due to a reduction in the number of eligible cases closed at the time coverage had to be renewed. New Mexico's Medicaid Renewal Pilot project allows recipients to re-certify for coverage by phone, fax, online, or mail. In addition, outreach staff calls individuals that need to re-certify.
- **Wisconsin** had an enrollment increase of 8.9%. While Wisconsin officials cite the economy as one factor in this increase, they indicate that program expansions were even more significant. One Wisconsin policy change in fiscal year 2008 expanded the BadgerCare Plus program to cover all uninsured children. Most of this enrollment increase occurred in the CHIP component of the BadgerCare Plus program (an increase of 46.7%). Wisconsin also expanded Medicaid coverage for parents so that the increase from June 2007 to June 2008 was greater for adults at 12% than for children at 6%.

Medicaid Enrollment Trends by Category

In addition to tracking trends in total enrollment, this study also collected data to show the distribution of enrollees by eligibility category whenever states were able to provide these data.

Children versus Adults (All States)

All states provided data on enrollment of children versus adults for each June and December starting with June 2006. States use slightly different ages to define who is a child or an adult, with the definition of adult typically beginning between age 19 and 21. In most states those enrolled in a child category are counted as children even if they are age 18 or older. (See notes in Appendix B for age definitions by state and other variations.) Since each state used consistent definitions and age splits from year-to-year, the information provides an accurate picture of Medicaid enrollment trends for children versus adults.

In previous reports we noted that children were affected more than adults by the enrollment reduction that occurred in the last half of 2006.⁸ Subsequently the enrollment of children increased at about the same rate as the enrollment of adults (including parents, pregnant women, and aged and disabled individuals). As a result, enrollment of adults in Medicaid was 2.9% greater in June 2008 than in June 2006 while enrollment of children increased by only 1.8% over that same period (Table 2).

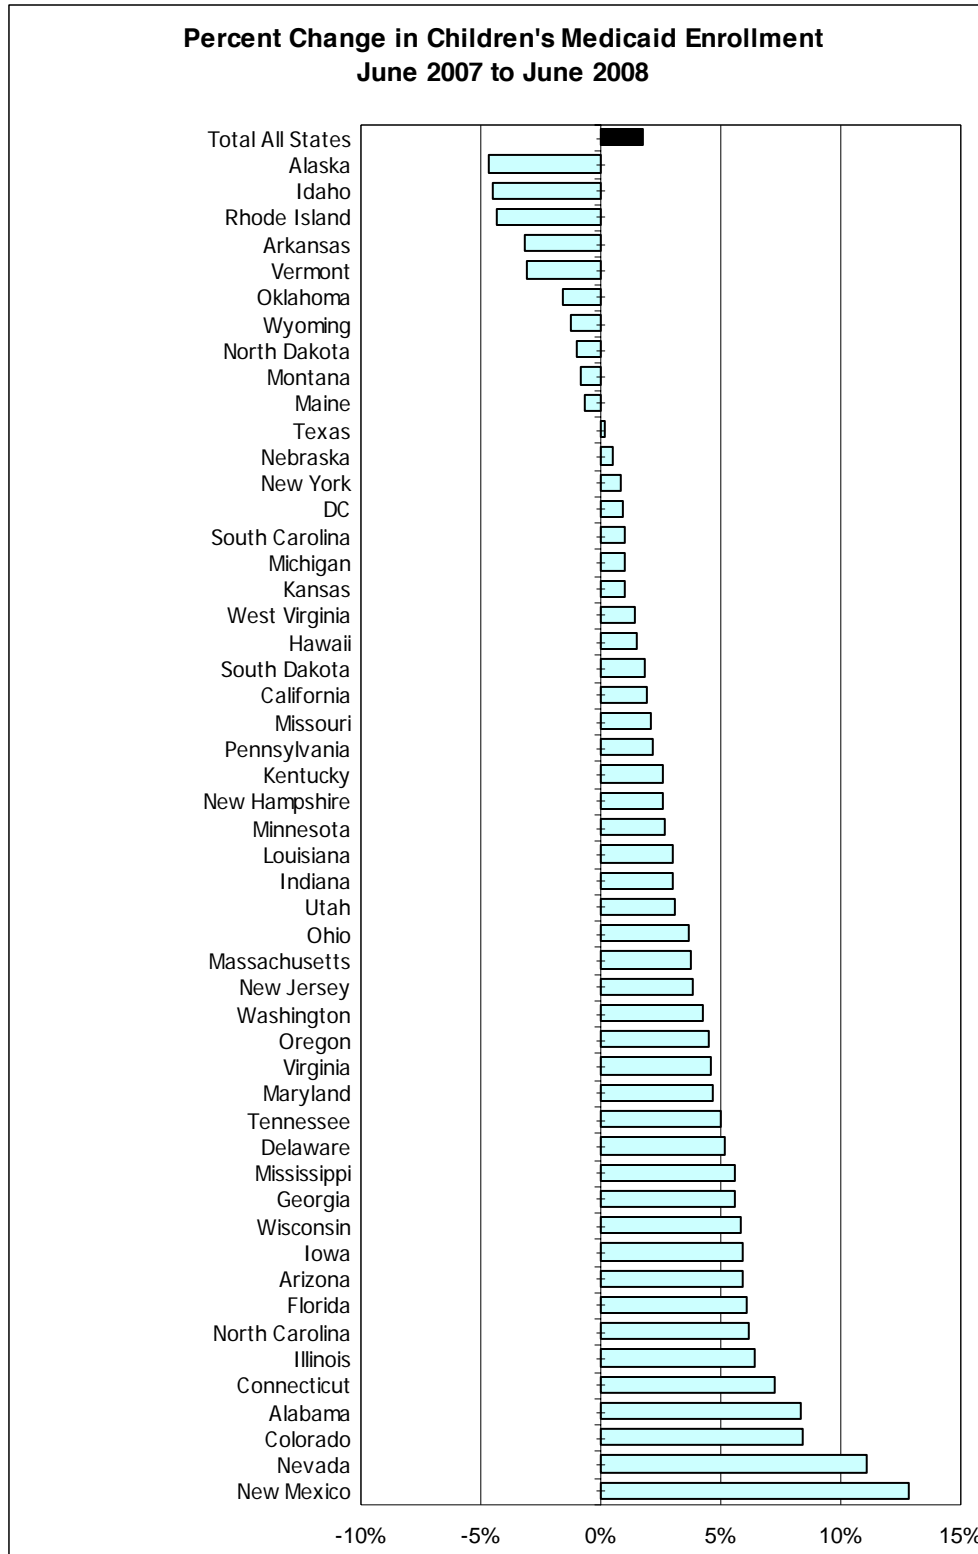

As noted above, total Medicaid enrollment increased by 3.0% from June 2007 to June 2008. The rate of change was slightly greater for children (3.1%) than for adults (2.9%). Table 2 and Figures 5 and 6 show that for these two categories there was significant variation in the enrollment changes among the states from June 2007 to June 2008.

Families, Children and Pregnant Women (45 States and the District of Columbia)

Forty-five states and the District of Columbia, representing 91.9% of total U.S. Medicaid enrollment, provided data on the number of children, parents, and pregnant women enrolled in Medicaid from June 1997 to June 2008. After an initial period of decline, enrollment in this category increased in every six-month interval from December 1998 to December 2005 and then decreased from December 2005 to June 2007. From June 2007 to June 2008 there was a rebound of enrollment in this category, an overall increase of nearly 900,000 individuals, or 3.2% (See Figure 7 and Table 3).

Figure 7

SOURCE: Compiled by Health Management Associates from state Medicaid enrollment reports.

Ten of these states had small enrollment declines in this category from June 2007 to June 2008. Table 3 shows that three states (Alaska, Idaho and Rhode Island) had enrollment declines greater than 4% in this category from June 2007 to June 2008.

The greatest increase in enrollment for this category was in Illinois, with an increase of 108,000 enrollees. Most of this increase is attributable to initiatives that expanded eligibility for children and parents in Illinois. Six other states had enrollment increases that exceeded 40,000 individuals. They were California (82,900), Florida (77,300), Wisconsin (49,900), North Carolina (53,100), Ohio (51,200) and Arizona (45,500). Two states (New Mexico and Nevada) had increases of 10% or greater.

SOURCE: Compiled by Health Management Associates from state Medicaid enrollment reports.

Aged and Disabled (45 States and the District of Columbia)

This category includes aged, blind, and disabled individuals with full Medicaid benefits or Medicaid with a deductible (“spend down”) and an estimated 1.84 million low-income Medicare beneficiaries who do not receive direct Medicaid benefits but are enrolled in the “Medicare Savings Program” component of Medicaid. This program provides varying levels of assistance with Medicare premiums, deductibles, and coinsurance.⁹

Figure 8

SOURCE: Compiled by Health Management Associates from state Medicaid enrollment reports.

The 45 states and the District of Columbia that provided information on this Medicaid group represent 91.9% of Medicaid enrollment in all states. While Medicaid enrollment of families, children and pregnant women has fluctuated, Medicaid enrollment of the aged and disabled has increased in every six-month interval covered by this study (Figure 8).

Table 4 shows that within the 2.5% average increase from June 2007 to June 2008, there is some state-to-state variation. However only two states, Idaho and Missouri, had an increase or decrease that was markedly different from the average.¹⁰ Blind and disabled Medicaid enrollment in Missouri increased by 17.9%, and aged enrollment increased by 11.7% in this 12-month period, from 125,500 to 145,100. (The 10.2% increase in this category in South Carolina represents a change in reporting, as noted at the bottom of Table 4.)

California's Income Disregard Program consists of enrollees from the 200% and 185% Poverty categories. The 200% Poverty enrollees are viewed as 185% Poverty due to a 1994 waiver.
 Presumptive Eligibility may not contain all enrollees in this program.
 Note: Excludes state-funded Medi-Cal groups.

NOTE: A new eligibility system implemented in 1999 has resulted in changes in category assignments.

SOURCE: State of Georgia Department of Community Health, Division of Medical Assistance.

Note: Due to the implementation of a new claims processing system, new aid categories have been created which contributes to the redistribution of members beginning with June 2003 data.

Appendix A: Enrollees with Limited Coverage

Medicaid coverage is generally comprehensive, regardless of eligibility category. However, certain Medicaid eligibility categories provide coverage for only limited services. Enrollment in these categories has been increasing. To the extent possible, these enrollees are excluded from the total Medicaid enrollment numbers in this report.

Family Planning Waivers

One limited coverage category is a family planning waiver in which women are enrolled in Medicaid for services related only to family planning. These waiver enrollees are not included in the Medicaid enrollment totals for this report. As of June 2008 there were 26 states with approved family planning waivers that had been implemented, the most recent being Pennsylvania. The structure and size of these programs varies significantly. While new programs are being implemented, some programs have been scaled back in recent years, as can be seen in the table below.

While the Pennsylvania waiver is new and enrollment is growing in other recently implemented waivers, total enrollment in family planning waiver programs declined by 15% from June 2007 to June 2008. While enrollment declined from June 2007 to June 2008 in 12 of the 24 states that provided data, most of the aggregate decrease is attributable to California, which has recently implemented a more restrictive citizenship documentation policy for its family planning waiver. Officials in other states have also indicated that after implementation of the DRA requirements, many enrollees failed to renew enrollment because it was not worth the effort (and possible expense) to receive this single benefit coverage.

Family Planning Waiver Enrollment in 24 States
June 1997 to June 2008

Source: Compiled by Health Management Associates from state enrollment reports.

The other states with approved family planning waivers that had been implemented as of June 2008 were New York and Oregon. While data from these states does not appear in the table above, enrollees in these two programs are also excluded from the Medicaid enrollment counts in this report.

Pharmacy Waivers

As of June 2008, approved Pharmacy Plus waivers in Illinois and Wisconsin covered about 276,000 senior citizens enrolled in Medicaid for pharmacy services alone. Maine and Vermont also have other Medicaid waivers that offer a pharmacy-only benefit to seniors. In June 2008 Maine's program had about 75,000 enrollees and Vermont had about 13,000 enrollees. These enrollees in all four states, a total of about 364,000 for all of the programs, are excluded from the Medicaid enrollment data in this report.

Medicare Savings Program

Another group of enrollees with limited coverage is Medicare beneficiaries who are enrolled in Medicaid for payment of some or all of their Medicare premiums, deductibles and coinsurance but receive no additional Medicaid benefits. This component of the Medicaid program is known as the Medicare Savings Program. While this program exists in all states, separate data were available from only 27 states which represent 53.2% of total U.S. Medicaid enrollment. In these 27 states, this group of enrollees has increased by 184.5% over the ten-year period from June 1997 to June 2008. Of particular note is the 33.6% enrollment increase between December 2005 and December 2006, most of which occurred between December 2005 and June 2006. This increase corresponds to the implementation of the Medicare Part D pharmacy program on January 1, 2006. Most of that increase occurred in two states, Florida and Mississippi. With the advent of the Medicare Part D prescription drug benefit, these two states dropped more extensive Medicaid coverage for individuals covered by both Medicare and Medicaid with incomes below the federal poverty level. Under the Medicare Savings Program these states continue to provide assistance with Medicare premiums, deductibles and coinsurance for these low-income Medicare enrollees.

Extrapolation of data from these 27 states to all states would indicate that there may be about 1.84 million Medicare Savings Program enrollees nationwide. Since many states do not separately track these limited benefit enrollees, they are included in the Medicaid enrollment numbers in this report unless otherwise noted.

Source: Compiled by Health Management Associates from state enrollment reports.

Note: Georgia's data included SLMBs and QIs for the first time in June 2003. Connecticut's enrollment totals include only SLMBs and QIs; QMBs are excluded from that state's enrollment totals.

Appendix B: Children versus Adults Notes

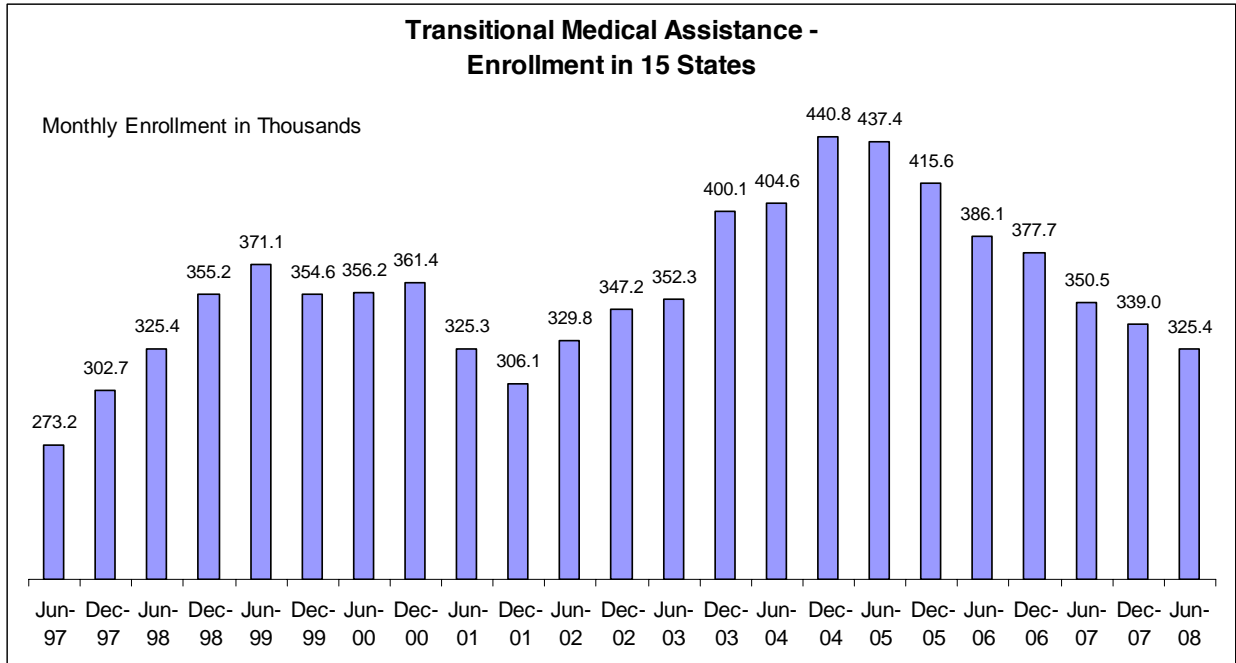

Several states provided data on Medicaid enrollment of children versus adults from a different data source than the source used to report total Medicaid enrollment by category. As a result, there are minor variations between total Medicaid enrollment in Table 2 and the total Medicaid enrollment in Table 1 for some states. The total difference for all states is 43,600 individuals, or about 0.1%. Disabled children are included in the Adult category for all states. Unless indicated otherwise, all non-disabled enrollees are included in the child category if their age is below the threshold noted below.

Family planning enrollees are not included in Table 2 for any state except as noted. CHIP children are not included in Table 2.

- **Alaska** - Enrollees under age 21 are considered Children.
- **Arizona** - Enrollees under age 20 are considered Children.
- **California** - Enrollees under age 21 are considered Children. Figures include a very small number of state-funded-only enrollees.
- **Colorado** - The count of Children includes an estimated 6.1% of Colorado's Non-Citizen Emergency Medical Only category (fewer than 5,000 individuals in December 2006).
- **Delaware** - Enrollees under age 19 are considered Children.
- **Florida** - Enrollees under age 19 are considered Children.
- **Hawaii** - Enrollees under age 21 are considered Children.
- **Illinois** - Enrollees under age 19 are considered Children. The source for the Children versus Adults split is *Illinois Department of Public Aid, Bureau of Rate Development and Analysis*.
- **Iowa** - IowaCare enrollees are included as adults since IowaCare serves primarily childless adults. Neither category (adult or child) contains "undefined" enrollees (fewer than 1,000).
- **Kansas** - Enrollees under age 19 are considered Children.
- **Kentucky** - Enrollees under age 20 are considered Children.
- **Louisiana** - Enrollees under age 21 are considered Children.
- **Maryland** - Enrollees under age 21 are considered Children.
- **Massachusetts** - Enrollees under age 18 are considered Children. Data includes some state-funded only enrollees.
- **Michigan** - Enrollees under age 18 are considered Children.
- **Minnesota** - Enrollees under age 21 are considered Children.
- **Mississippi** - Enrollees under age 21 are considered Children.
- **New Jersey** - Enrollees under age 21 are considered Children.
- **New York** - Neither category contains Family Health Plus and Other enrollees.
- **North Carolina** - Enrollees under age 21 are considered Children.
- **North Dakota** - Adult category includes all poverty related and categorically needy pregnant women, irrespective of age. Neither category contains Refugee enrollees (fewer than 50).
- **South Carolina** - Enrollees under age 19 are considered Children.
- **Tennessee** - Enrollees under age 20 are considered Children.
- **Wisconsin** - Enrollees under age 21 are considered Children.
- **Wyoming** - Neither category contains Refugee and Alien enrollees. All pregnant individuals are included in the Adults category.

Appendix C: Transitional Medical Assistance (TMA) (15 States)

This Medicaid category was created as part of national welfare reform to temporarily extend Medicaid eligibility for uninsured families that no longer qualified for income assistance from the Temporary Assistance for Needy Families (TANF) program or lose Medicaid eligibility due to increased income. Fifteen states provided data on trends in this enrollment group. Enrollment in this category fluctuates greatly over time, as seen in the following graph and table. Since December 2004, there has been a continuous decline in TMA enrollment, largely due to a decrease in TANF enrollment and therefore a reduction in the number of TANF case closures.

Appendix D: Poverty-Related Medicaid Enrollment (21 States)

This subset of the larger “families, children and pregnant women” category includes low-income children and low-income pregnant women. For these 21 states, enrollment in this group increased by 3.4% from June 2007 to June 2008. This is slightly greater than enrollment in the larger group of families, children and pregnant women which was 3.2% for 46 states (Table 3).

SOURCE: Compiled by Health Management Associates from state Medicaid enrollment reports

Appendix E: Study Methodology and Data Issues

This study is based on data provided by each of the 50 states and the District of Columbia. Health Management Associates asked each state to provide the internal reports they use to track enrollment in the program. Each state's report included total enrollment and enrollment in certain eligibility categories. Report categories are not standardized across states. Where it was possible to do so, the state enrollment data were grouped to further examine trends in specific Medicaid eligibility categories.

The data tables and graphs in this document present "point-in-time" monthly Medicaid enrollment counts for the months of June and December of each year from June 1997 through June 2008. The data were provided to Health Management Associates by each state Medicaid program between September and December 2008.

To provide timely data and not overly burden state agency staff, states were asked to provide "off-the-shelf" reports on Medicaid enrollment. In other words, these are generally the same reports states use for their own purposes. Since each state uses different categories in internal enrollment reports, it is not possible to track enrollment detail for all 50 states and the District of Columbia. This report provides information on enrollment trends for categories of enrollees across as many states as possible, given the limitations of the source data.

Point-in-Time Values

National reports issued by CMS also use data provided by state Medicaid agencies. CMS reports show the total number of persons "ever-enrolled" in Medicaid during a quarterly or annual period. The "ever-enrolled" measure of Medicaid enrollment used in CMS reports differs from the "point-in-time" measure of Medicaid enrollment used here. CMS reports show the unduplicated count of persons enrolled at any time and for any length of time during the indicated reporting period. For example, in annual CMS reports, a person enrolled in Medicaid for one month of the year and a person enrolled for the entire year are each counted as one enrollee for that year. In contrast, the data reported in this report show enrollment in specific months. Given that each month individuals enroll and disenroll, the enrollment count in any specific month will always be less than the number ever-enrolled during a 12-month period. The extent to which the monthly number is less than the "ever-enrolled" number depends on the extent of monthly enrollment, disenrollment and re-enrollment activity.

Common Categorization of Enrollees

The initial expectation was that it would be possible to compare trends in most of the states for all of the categories used in the cross-state trends. As the data were received from the states, we found that none of these categories existed in every state. For this report we placed special emphasis on the split between children and adults and were able to secure this information from all but one of the states.

Medicaid Expansion CHIP Enrollees

Enrollees in Medicaid expansion CHIP programs have been excluded from this analysis. Many states provided separate tabulations of these enrollees, and these individuals were excluded from all data in this report. Other states included these enrollees in their Medicaid data and did not provide specific information on the number of children or adults in Medicaid expansion CHIP groups. For these states, HMA reduced the Medicaid enrollment by the number of Medicaid expansion CHIP enrollees reported to HMA for the separate Kaiser Commission on Medicaid and the Uninsured report on CHIP enrollment as of June 2008.

Level of Data Detail

A related issue is the great variety in the level of detail we received from the states. The number of distinct categories ranged from 2 to 166, with the exception of two states for which only totals were available for the first two years of data. The states with the greatest numbers of categories provided us with algorithms used by the state to aggregate the data. HMA applied these algorithms to the detailed data to create aggregations that are more meaningful.

Data Completeness

As a result of the processing time and possibility of retroactive eligibility, counts of Medicaid enrollment for a specific month may change over the following several months. The data in this study are based on state reports usually produced two to five months following the indicated month. Effort was made to use reports that reflect retroactive eligibility where they exist, and, for each period, to use reports that reflect the same adjustments. Nevertheless, it is possible that additional changes may have occurred subsequent to the counts provided for our use in this study.

Variation in Definitions of Medicaid Enrollment

States vary in how they count enrollment for a given month for their own purposes. Some states count the number of enrollees as of the first day of the month and never adjust the report. Some states count the number of enrollees as of the last day of the month and never adjust the report. Data for some states also include “retroactive” eligibles, i.e., individuals whose Medicaid eligibility is established at a later date, but whose coverage is retroactive to a prior point in time. When a person applies for Medicaid, federal processing standards allow the state up to 45 days to complete the eligibility determination process. In this process, for some Medicaid categories it is possible for a state to look at the period immediately prior to the date of application and determine whether eligibility criteria were met for a period of as many as 90 days prior to the date of application (and if eligible, to cover medical bills incurred in this period.)

States also vary in their treatment of “spend-down” enrollees. Some states include in their enrollment counts persons with excess income that qualify to “spend-down” to Medicaid eligibility whether or not they have incurred sufficient medical costs to become eligible for Medicaid in that month. Other states only include those individuals that have met their “spend-down” requirement. Since a primary goal of this report is to identify trends, these variations have been deemed acceptable, as long as a given state does not change its methodology over time.

The counts provided by the states reflect all persons with Medicaid eligibility for each month. Different eligibility categories have different levels of Medicaid coverage. Every person with Medicaid coverage was counted as an enrollee with the exception of family planning waiver enrollees and pharmacy plus waiver enrollees. No adjustment was made for other persons who are enrolled in Medicaid categories with less than full coverage. Therefore the count of persons on Medicaid includes a small number of individuals that are covered by Medicaid only for emergency services and persons with Medicare and Medicaid dual eligibility who are enrolled as Qualified Medicare Beneficiaries (QMBs), Specified Low-Income Medicare Beneficiaries (SLMBs) or Qualified Individuals (QIs) for whom Medicaid pays only a portion of Medicare premiums, co-payments and deductibles. (See Appendix A for a more detailed discussion of enrollees with limited benefits).

To the extent possible, persons in state-only health coverage programs that are not funded by the federal Medicaid program are excluded in the count of Medicaid enrollees.

While Health Management Associates asked the state Medicaid agencies for “off-the-shelf” reports used by the states to track Medicaid enrollment, some states chose to produce special reports for use in this report. In some of the states the single state agency for Medicaid does not determine Medicaid eligibility, so data were obtained from the eligibility agency.

Appendix F: Methodology – Eligibility Categories

The following lists the eligibility categories used from each state's enrollment data to create the aggregated eligibility categories for this report. Title XXI children are not included in any category.

Families, Children & Pregnant Women (Forty- Six States)

Alabama:

- Low Income Families
- Pregnant Women and Children Below Poverty
- Refugees
- Foster Children (LIF)
- Foster Children – other
- Newborns of SSI moms

Alaska:

- Poverty Related
- Low Income Families
- Transitional Medicaid
- Children under 21 in State Custody
- Other Adults
- Other Children

Arizona

- Low Income Families
- TMA
- Poverty Related (SOBRA)
- Other Families with Children

Arkansas:

- AFDC/TANF

Notes

¹ The “point-in-time” monthly enrollment counts in this report differ from enrollment counts in other reports that show the number of persons “ever-enrolled” at any time and for any length of time over a year. For example, in March 2007, the Congressional Budget Office reported that Medicaid would cover 62.2 million individuals in fiscal year 2007, using an “ever-enrolled” methodology and counting individuals enrolled in Medicaid for a single benefit such as a Family Planning Waiver or Pharmacy Plus Waiver, or as residents of the U.S. Territories. For this report we count individuals with full Medicaid benefits or Medicaid with a deductible (“spend down”), as well as low-income Medicare beneficiaries who receive varying levels of assistance with their Medicare premiums, deductibles, and coinsurance. This report excludes about 2.8 million single benefit enrollees, roughly 1 million Medicaid enrollees in the U.S. territories and 1.3 million children enrolled in Medicaid expansion CHIP programs funded through Title XXI. If all of those groups were included, the point-in-time enrollment for June 2008 would be 48.6 million. It should also be noted that this report does include an estimated 1.84 million low-income Medicare beneficiaries who only receive Medicaid assistance with their Medicare premiums and/or cost-sharing.

² Smith V, Gifford K, Ellis E, Rudowitz R, O’Malley M and Marks C. *Headed for a Crunch” An Update on Medicaid Spending, Coverage and Policy Heading into an Economic Downturn*. Washington, D.C.: The Kaiser Commission on Medicaid and the Uninsured, Kaiser Family Foundation, September 2008. Available at: <http://www.kff.org/medicaid/7815.cfm>.

³ Section 6036 of The Deficit Reduction Act of 2005 (P.L. 109-171) required that as of July 1, 2006, all United States citizens applying for or renewing Medicaid coverage present “satisfactory documentary evidence” of their citizenship. See “New Requirements for Citizenship Documentation in Medicaid,” Kaiser Commission on Medicaid and the Uninsured, December 2007, <http://www.kff.org/medicaid/7533.cfm>. State officials report that these new rules caused significant delays in processing applications and renewals for eligible citizens, contributing greatly to a slowdown in enrollment growth. However some state officials noted that the delay in application processing would result in only a temporary enrollment decline. These officials expected that enrollment would stabilize or increase as the longer enrollment processing timeframes became the norm. See: Smith V, Gifford K, Ellis E, Rudowitz R, O’Malley M and Marks C. *As Tough Times Wane, States Act to Improve Medicaid Coverage and Quality: Results from a 50-State Medicaid Budget Survey for State Fiscal Years 2007 and 2008*. Washington, DC: The Kaiser Commission on Medicaid and the Uninsured, Kaiser Family Foundation, October 2007. Available at <http://www.kff.org/medicaid/7699.cfm>.

⁴ Ellis E, Roberts D, Rousseau D, Schwartz K. *Medicaid Enrollment in 50 States: December 2006 Data Update*. Washington D.C.: The Kaiser Commission on Medicaid and the Uninsured, Kaiser Family Foundation, January 2008. Available at <http://www.kff.org/medicaid/7606.cfm>.

⁵ Holahan J and Garrett A. *Rising Unemployment, Medicaid and the Uninsured*. Washington, D.C.: The Kaiser Commission on Medicaid and the Uninsured, Kaiser Family Foundation, January 2009. Available at <http://www.kff.org/uninsured/7850.cfm>.

⁶ Throughout this report the term “state” includes the District of Columbia.

⁷ Information used in this section includes published and unpublished survey findings from the annual 50-state Medicaid budget surveys for state fiscal years 2007, 2008 and 2009. The published information is included in two reports listed above, Smith et al., 2007 and Smith et al., 2008.

⁸ Ellis E, Roberts D, Rousseau D, Schwartz K. *Medicaid Enrollment in 50 States: December 2006 Data Update*. Washington D.C.: The Kaiser Commission on Medicaid and the Uninsured, Kaiser Family Foundation, January 2008. Available at <http://www.kff.org/medicaid/7606.cfm>.

⁹ Virtually all of the elderly and approximately one-third of the disabled Medicaid enrollees also receive assistance from the Medicare program. Some of these “dual-eligibles” have full Medicaid coverage that supplements their Medicare benefits. Others receive Medicaid support only for their Medicare premiums, deductibles and co-insurance. The estimate that there are 1.8 million Medicaid enrollees in the Medicare

Savings Program who receive only Medicare cost-sharing is based on an extrapolation of data from 27 states. (See Appendix A for more details.)

¹⁰ Idaho recently restructured its Medicaid program to provide differential benefit packages targeted to the needs of particular populations. Idaho experienced a 19% increase in Aged and Disabled Medicaid between December 2006 and December 2007. Most of the increase occurred in the “Enhanced” component of the Idaho Medicaid program which covers individuals with disabilities or special needs that do not have dual Medicare eligibility. Since the Enhanced plan offers additional services beyond the Basic program offered to families and children, individuals with disabilities or special needs have an incentive to be enrolled in this category rather than other Medicaid categories.
