***Kaiser Health Tracking Poll: November 2009***

**November 2009**

---

## **Methodology**

This *Kaiser Health Tracking Poll* was designed and analyzed by public opinion researchers at the Kaiser Family Foundation led by Mollyann Brodie, Ph.D., including Claudia Deane and Carolina Gutiérrez. The survey was conducted November 5 through November 12, 2009, among a nationally representative random sample of 1,203 adults ages 18 and older. Note that interviews were conducted both before and after the vote on the House leadership bill on November 7. Our analysis found no substantive differences in opinion before and after the House vote. Telephone interviews conducted by landline (802) and cell phone (401, including 112 who had no landline telephone) were carried out in English and Spanish by Princeton Survey Research Associates.

The margin of sampling error for the total sample is plus or minus 4 percentage points. For results based on subgroups, the margin of sampling error is higher. Note that sampling error is only one of many potential sources of error in this or any other public opinion poll.

Trends in this document come from surveys listed on the last page.

Values less than 0.5% are indicated by an asterisk (\*).

“VOL” indicates that a response was volunteered by respondent, not an explicitly offered choice.

Due to rounding, percentages may not add to 100.
