National Survey of the Public's Views on Medicare

Methodology

The Kaiser Family Foundation/Harvard School of Public Health *National Survey of the Public's Views on Medicare* was designed and analyzed by researchers at the Kaiser Family Foundation and Harvard School of Public Health. The Kaiser/Harvard survey research team included Mollyann Brodie, Ph.D., Tricia Neuman, Ph.D., Kristina Hanson, Ph.D., and Liz Hamel from the Kaiser Family Foundation; and Professor Robert Blendon, Sc.D., and John Benson, M.A. of the Harvard School of Public Health. Fieldwork was conducted by telephone by Princeton Survey Research Associates between April 25 and June 1, 2003, among a nationally representative random sample of 1,424 respondents 18 years of age and older. The survey included an oversample of respondents ages 65 and older (a total of 441 respondents ages 65 and older were interviewed). Results for all age groups have been weighted to reflect the actual distribution in the nation.

The margin of sampling error for the survey is plus or minus 3 percentage points for total respondents; for respondents ages 18-64 it is plus or minus 3 percentage points; and for respondents ages 65 and older it is plus or minus 5 percentage points. For results based on smaller subsets of respondents the margin of error is higher. Note that sampling error is only one of many potential sources of error in this or any other public opinion poll.

In order to get trend data, three questions were added to an omnibus survey between May 23 and May 27, 2003. See the last section of this document for more details and the results.

Values less than 0.5% are indicated by an asterisk (*). "VOL" indicates that a response was volunteered by respondent, not an explicitly offered choice.

62. Earlier in the survey, you said that most seniors in the future should receive their health insurance through Medicare as it exists today, rather than through various private health plans, such as PPOs and HMOs. I'm going to read you some arguments that have been made in FAVOR of providing health insurance to seniors through private health plans. Some people say that seniors should have a choice among health plans that offer benefits more tailored to individuals' health-care needs, rather than the one-size-fits-all Medicare program. They also say that competition among private plans would do a better job than Medicare at keeping health care costs down. Lastly, they say that Medicare is a government-run bureaucracy that needs to be modernized.

After hearing these arguments, do you still prefer Medicare as it exists today, or do you now prefer various private health plans?

63. Earlier in the survey, you said that most seniors in the future should receive their health insurance through various private health plans, such as PPOs and HMOs, rather than through Medicare as it exists today. I'm going to read you some arguments that have been made AGAINST providing health insurance to seniors through private health plans. Some people say these plans would be more likely to reduce the benefits or increase costs to seniors in the plans. They also say private plans put profits first, and could drop seniors from the plans because of concerns about losing money. Lastly, they say that seniors in private plans would no longer be able to choose their own doctors and hospitals.

After hearing these arguments, do you still prefer various private health plans, or do you now prefer Medicare as it exists today?
