# **Survey of G7 Nations on HIV Spending in Developing Countries**

**July 2005**

---

## Methodology

The Kaiser Family Foundation Survey of G7 Nations on HIV Spending in Developing Countries was designed, analyzed and conducted by researchers at the Kaiser Family Foundation. Fieldwork was coordinated by GlobeScan Incorporated, and interviews were done by GlobeScan’s partner firms in each of the G7 countries (Canada, France, Germany, Great Britain, Italy, Japan, and United States). Interviews were conducted by telephone in each country except Japan, where interviews were face-to-face. A nationally representative random sample of adults was interviewed in each country. Results have been weighted to be representative of the each country’s population by sex, age, and other key demographic factors.

Details on the interview dates, sample, and margin of sampling error for each country are provided in the table below. Note that sampling error is only one of many potential sources of error in this or any other public opinion poll.

<b>Country</b>	<b>Sample Size</b>	<b>Interview dates</b>	<b>Sample frame</b>	<b>Margin of sampling error</b>
Canada	1002	May 02 – May 08, 2005	18 years or older	±3 percentage points
France	1002	May 02 – May 06, 2005	15 years or older	±3 percentage points
Germany	1001	April 27 – April 28, 2005	14 years or older	±4 percentage points
Great Britain	1005	May 06 – May 08, 2005	18 years or older	±3 percentage points
Italy	1009	May 05 – May 09, 2005	15 years or older	±5 percentage points
Japan	1369	May 12 – May 15, 2005	20 years or older	±3 percentage points
USA	1003	May 06 – May 08, 2005	18 years or older	±4 percentage points

It should be noted that the percent of respondents answering “Don’t know” to most questions in this survey is significantly higher in Japan than in other countries. This pattern is consistent with other projects where surveys are conducted in Japan compared with other countries in which respondents are asked to express an opinion on topics with which they are less familiar, and may reflect a cultural difference between Japan and Western societies.

“Vol.” indicates that a response was volunteered by respondent, not an explicitly offered choice.

# Perceptions of Progress on HIV/AIDS

Thinking about the way the problem of HIV/AIDS affects the world today, do you think the HIV epidemic is **ABOUT THE SAME** as it has been, that the world today is **MAKING PROGRESS** in dealing with the epidemic, or that the world today is **LOSING GROUND**?

# Perceptions of Spending by Your Country

Do you think [YOUR COUNTRY] is giving too much, too little, or about the right amount of money to assist the developing countries most affected by the HIV/AIDS epidemic?

Chart 3

# Perceptions of Spending by Other Developed Nations

Do you think developed nations other than [YOUR COUNTRY], such as the United Kingdom, France, Italy, Germany, and Japan are giving too much, too little, or about the right amount of money to assist the developing countries most affected by the HIV/AIDS epidemic?

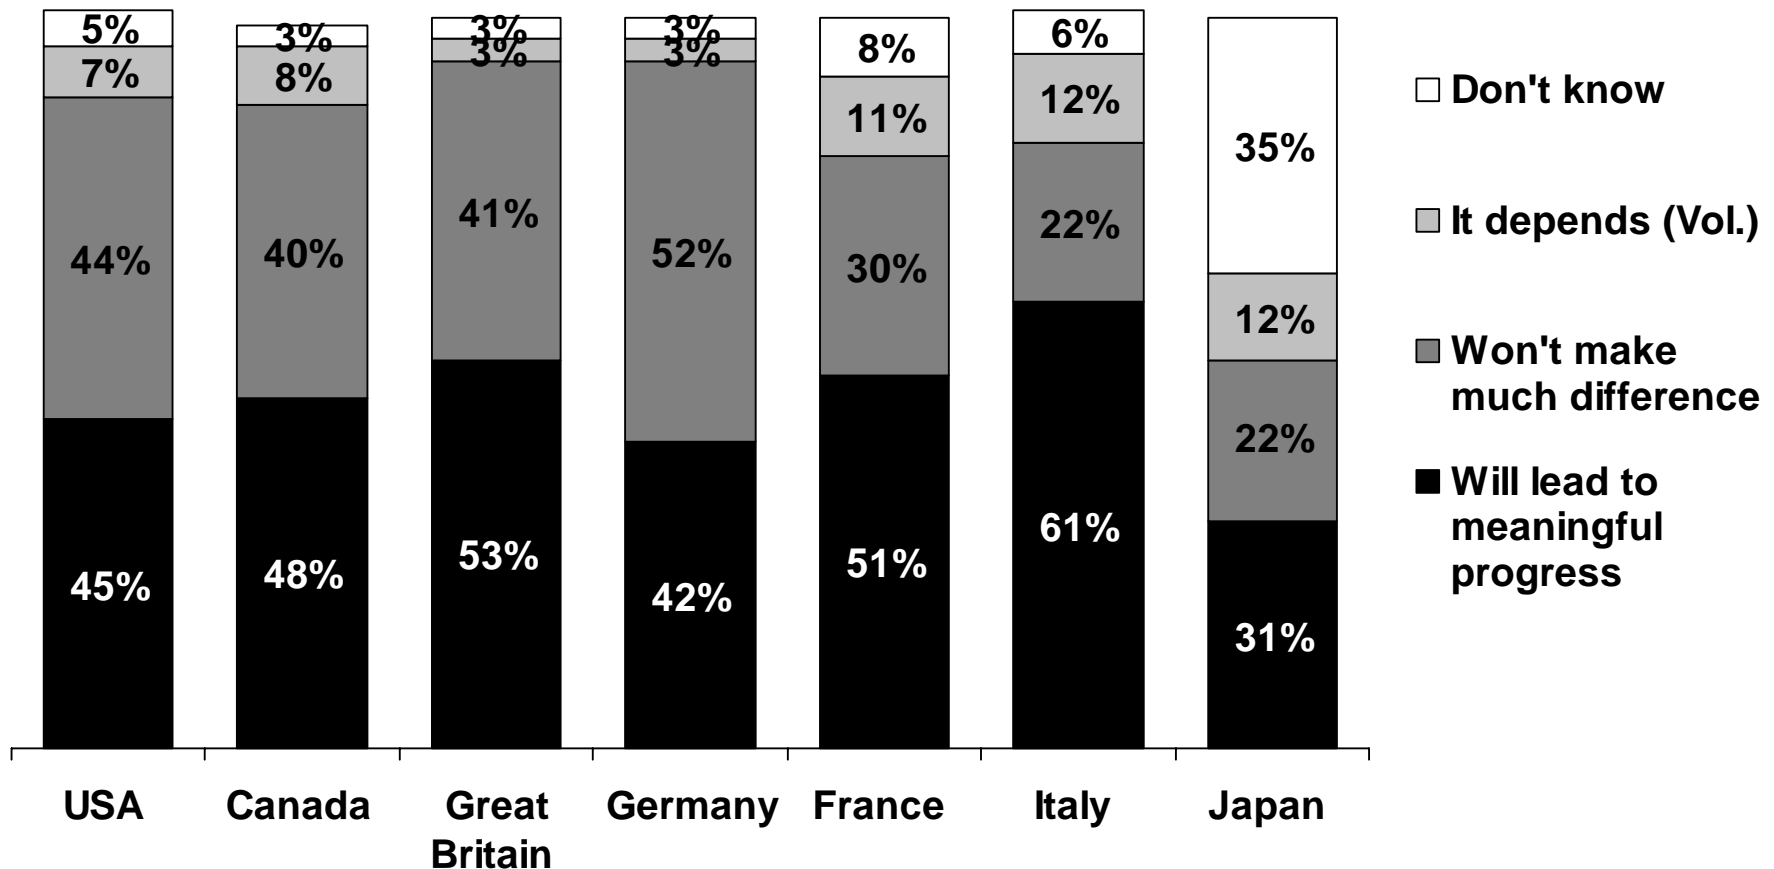

# Perceptions of Spending by the United States

Do you think THE UNITED STATES is giving too much, too little, or about the right amount of money to assist the developing countries most affected by the HIV/AIDS epidemic?

# Will Spending on HIV/AIDS Lead to Progress?

In general, do you think that providing more money to developing countries for HIV/AIDS prevention and treatment will lead to meaningful progress in slowing the epidemic, or that more money won't make much difference?
