***Kaiser Health Tracking Poll: December 2011***

**December 2011**

---

### Methodology

This *Kaiser Health Tracking Poll* was designed and analyzed by public opinion researchers at the Kaiser Family Foundation led by Mollyann Brodie, Ph.D., including Claudia Deane, Sarah Cho, and Theresa Boston. The survey was conducted December 8-13, 2011, among a nationally representative random sample of 1,212 adults ages 18 and older. Telephone interviews conducted by landline (708) and cell phone (504, including 285 who had no landline telephone) were carried out in English and Spanish by Princeton Survey Research Associates.

The margin of sampling error for results based on the full sample is plus or minus 3 percentage points. For results based on subgroups, the margin of sampling error may be higher. Note that sampling error is only one of many potential sources of error in this or any other public opinion poll.

Trends in this document come from surveys listed on the last page.

Values less than 0.5% are indicated by an asterisk (\*).

“VOL.” indicates that a response was volunteered by respondent, not an explicitly offered choice.

Due to rounding, percentages may not add to 100.
