- The numbers in this table reflect the net change in actions taken by states from year to year. Specific strategies may be adopted and retracted by several states during a given year.
- These counts do not include states that may have provided coverage above the levels shown using state-only funding or provide a more limited benefit package.
- Required across all states under the Affordable Care Act (ACA). States are in varied stages of implementing the new streamlined enrollment and renewal processes under the ACA, and mitigation strategies are in place in cases in which requirements have not been met.
